Ecology Exper Anal Di 3 Int:

Guide to Ambient Intelligence in the IoT Environment Zaigham Mahmood, 2019-01-01 Ambient intelligence AmI is an element of pervasive computing that brings smartness to living and business environments to make them more sensitive adaptive autonomous and personalized to human needs It refers to intelligent interfaces that recognise human presence and preferences and adjust smart environments to suit their immediate needs and requirements The key factor is the presence of intelligence and decision making capabilities in IoT environments The underlying technologies include pervasive computing ubiquitous communication seamless connectivity of smart devices sensor networks artificial intelligence AI machine learning ML and context aware human computer interaction HCI AmI applications and scenarios include smart homes autonomous self driving vehicles healthcare systems smart roads the industry sector smart facilities management the education sector emergency services and many more The advantages of AmI in the IoT environment are extensive However as for any new technological paradigm there are also many open issues and limitations This book discusses the AmI element of the IoT and the relevant principles frameworks and technologies in particular as well as the benefits and inherent limitations It reviews the state of the art of current developments relating to smart spaces and AmI based IoT environments Written by leading international researchers and practitioners the majority of the contributions focus on device connectivity pervasive computing and context modelling including communication security interoperability scalability and adaptability The book presents cutting edge research current trends and case studies as well as suggestions to further our understanding and the development and enhancement of the AmI IoT vision

Seaweed Ecology and Physiology Christopher S. Lobban, Paul J. Harrison, 1994 A rewritten and re organised edition of The Physiological Ecology of Seaweeds 1985 Seaweed Ecology and Physiology surveys the broad literature but it is not merely an update of the earlier book This book contains an introductory chapter reviewing seaweed morphology cytology and life histories The chapter on community level ecology now includes six guest essays by senior algal ecologists which conveys the excitement of phycological research The treatment of tropical seaweeds had been expanded reflecting the growing literature from tropical regions and the authors experiences in the tropics The final chapter on mariculture is much larger and includes a case study on how principles of physiological ecology were applied in developing the carrageenan industry Finally there is an appendix summarising the taxonomic position and nomenclature of the species mentioned in the book

Evolution Mechanism and Control Method of Engineering Disasters Under Complex Environment Jianyong Han, Xiaoyu Bai, Zhongqiang Liu, Jae-Joon Song, Pengjiao Jia, 2025-03-03 As the result of resource exploitation and underground space

development the engineering disasters appear including landslides tunnel collapses earthquakes debris flow and urban facility failures which may lead to substantial economic damages and loss of lives The engineering challenges from the geotechnical engineering have attracted wide attention A large number of engineering disasters like water gushing sand inrush seepage damage gas leakage and gas explosion are triggered due to the complex environment such as high water or gas stress seepage effect and fluid solid interaction In order to control the engineering disaster the primary task to be solved is to reveal the engineering disaster initiation and evolution mechanism induced under complex environment

Emerging zoonoses: eco-epidemiology, involved mechanisms and public health implications Rubén Bueno-Marí, A. Paulo Gouveia Almeida, Juan Carlos Navarro, 2015-07-06 Zoonoses are currently considered as one of the most important threats for public health worldwide Zoonoses can be defined as any disease or infection that is naturally transmissible from vertebrate or invertebrate animals to humans and vice versa Approximately 75% of recently emerging infectious diseases affecting humans are diseases of animal origin approximately 60% of all human pathogens are zoonotic All types of potential pathogenic agents including viruses parasites bacteria and fungi can cause these zoonotic infections From the wide range of potential vectors of zoonoses insects are probably those of major significance due to their abundance high plasticity and adaptability to different kinds of pathogens high degrees of synanthropism in several groups and difficulties to apply effective programs of population control Although ticks flies cockroaches bugs and fleas are excellent insects capable to transmit viruses parasites and bacteria undoubtedly mosquitoes are the most important disease vectors Mosquito borne diseases like malaria dengue equine encephalitis West Nile Mayaro or Chikungunya are zoonoses with increasing incidence in last years in tropical and temperate countries Vertebrates can also transmit serious zoonoses highlighting the role of some carnivorous animals in rabies dissemination or the spread of rodent borne diseases in several rural and urban areas Moreover the significance of other food borne zoonoses such as taeniasis trichinellosis or toxoplasmosis may not been underestimated According to WHO FAO and OIE guidelines an emerging zoonotic disease can be defined as a zoonosis that is newly recognized or newly evolved or that has occurred previously but shows an increase of incidence or expansion in geographical host or vector range There are many factors that can provoke or accelerate the emergence of zoonoses such as environmental changes habitat modifications variations of human and animal demography pathogens and vectors anomalous mobilization related with human practices and globalization deterioration of the strategies of vector control or changes in pathogen genetics To reduce public health risks from zoonoses is absolutely necessary to acquire an integrative perspective that includes the study of the complexity of interactions among humans animals and environment in order to be able to fight against these issues of primary interest for human health In any case although zoonoses represent significant public health threats many of them still remain as neglected diseases and consequently are not prioritized by some health international organisms

surveys and algorithmic developments are performed in well established Bayesian frameworks Low level scene understanding functions are formulated as various image segmentation problems where the advantages of probabilistic inference techniques such as Markov Random Fields MRF or Mixed Markov Models are considered For the object level scene analysis the book mainly relies on the literature of Marked Point Process MPP approaches which consider strong geometric and prior interaction constraints in object population modeling In particular key developments are introduced in the spatial hierarchical decomposition of the observed scenarios and in the temporal extension of complex MRF and MPP models Apart from utilizing conventional optical sensors case studies are provided on passive radar ISAR and Lidar based Bayesian environment perception tasks It is shown via several experiments that the proposed contributions embedded into a strict mathematical toolkit can significantly improve the results in real world 2D 3D test images and videos for applications in video surveillance smart city monitoring autonomous driving remote sensing and optical industrial inspection

International Symposium on World Ecological Design Fangtian Ying,Ran Wan,Qun Wu,2024-04-15 With the world facing increasingly serious global climate change and resource scarcity issues ecology and the environment have received much attention in recent years As a major factor in human activity design plays an important part in protecting the environment as does the role of digital technology in finding solutions to the pressing problems faced in this regard This book presents the proceedings of ISWED2023 the International Symposium on World Ecological Design held on 17 December 2023 in Guangzhou China Sponsored by the World Eco Design Conference a UN Consultative NGO the conference provides a platform for professionals and researchers from industry and academia to present and discuss recent advances in the field of ecological design This year the conference focused on the four topics of digital technology and health digital technology and transportation digital technology and energy and digital technology and the environment A total of 518 submissions on these topics were received for the conference of which 125 were accepted for presentation and publication here Providing a current overview of research and innovation in ecological design around the world the book will be of interest to all those working in the fields of ecological design and digital technology integration
