The Limits of Choice Sahra Wagenknecht, 2013-10-02 In *The Limits of Choice* Sahra Wagenknecht examines household saving decisions and basic needs in Germany and the United States based on official data from both countries from the 1950s to present day Arguing against the hypothesis that assumes consumers optimize their consumption intertemporally based exclusively on their permanent or lifetime income Wagenknecht proposes a rule of thumb according to which consumers will save if their current income exceeds basic expenditure while they will demand credit when income can no longer meet basic needs

The Economics of Saving James H. Gapinski, 2013-03-09 This book began when a letter reached my desk in November 1989 Written by Warren Samuels professor of economics at Michigan State University and editor for Kluwer Academic Publishers the letter reviewed the philosophy behind Kluwer's series on recent economic thought and accordingly expressed interest in the controversies that surround contemporary topics in the discipline It graciously went on to invite me to organize consonant with that philosophy a volume of chapters on saving Soon thereafter I learned that the chapters were to be original compositions I also learned that I would have substantial flexibility in structuring the volume and in recruiting contributors who logically would be authorities in the field Succinctly Samuels was inviting me to work with leading scholars in exploring the current controversies in saving one of my favorite subjects That invitation was simply too tempting to refuse Preparation of the book's outline went smoothly It was obvious that the statistics of saving should be covered along with the theories of saving It was equally obvious that special issues must be addressed Ricardian Equivalence supply side doctrine and economic development among others These themes should be handled so as to bring out the ideological tensions in the profession and that criterion helped to shape the list of potential contributors That is both sides of a conflict should be represented and both should be given the same treatment

Knight, Norman Loayza, 1992-12-01 Several recent empirical studies have examined determinants of economic growth using country average cross section data In contrast this paper employs a technique for using a panel of both cross section and time series data for 98 industrial and

developing countries over 1960-85 to determine the quantitative importance for economic growth of both country specific and time varying factors such as human capital, public investment and outward oriented trade policies. The empirical results provide support for the view that these factors exert a positive and significant influence on economic growth.
