*From Populations to Ecosystems* Michel Loreau, 2010-07-01 The major subdisciplines of ecology population ecology community ecology ecosystem ecology and evolutionary ecology have diverged increasingly in recent decades What is critically needed today is an integrated real world approach to ecology that reflects the interdependency of biodiversity and ecosystem functioning *From Populations to Ecosystems* proposes an innovative theoretical synthesis that will enable us to advance our fundamental understanding of ecological systems and help us to respond to today's emerging global ecological crisis Michel Loreau begins by explaining how the principles of population dynamics and ecosystem functioning can be merged He then addresses key issues in the study of biodiversity and ecosystems such as functional complementarity food webs stability and complexity material cycling and metacommunities Loreau describes the most recent theoretical advances that link the properties of individual populations to the aggregate properties of communities and the properties of functional groups or trophic levels to the functioning of whole ecosystems placing special emphasis on the relationship between biodiversity and ecosystem functioning Finally he turns his attention to the controversial issue of the evolution of entire ecosystems and their properties laying the theoretical foundations for a genuine evolutionary ecosystem ecology From

Populations to Ecosystems points the way to a much needed synthesis in ecology one that offers a fuller understanding of ecosystem processes in the natural world *Advances in Ecological Research* ,1999-12-10 The six reviews in this latest issue of *Advances in Ecological Research* cover a broad spectrum of ecology from micro patterns and processes to the ecophysiology of the individual organism to forest scale processes Topics covered include the possible evolutionary forces that have shaped particular strategies and the potential and limitations for techniques in ecology such as fractal geometry field experiments and eddy co variance measures Despite this diversity of topics there are plenty of points of contact and cross reference *The Publishers Weekly* ,1974 *Nitrogen in Terrestrial Ecosystems* Carl O. Tamm,2012-12-06 Nitrogen is a key element in ecosystem processes Aspects of local and global changes in nitrogen in both undisturbed and disturbed conditions are discussed Environmental changes caused by pollution from nitrogenous compounds and changes in landuse are also described Organisms plants animals and microorganisms are all affecting nitrogen supply Emphasis is placed on natural and anthropogenic transfer of nitrogen between ecosystems and also on the interaction of nitrogen with other bioelements **Foundations of Socio-Environmental Research** William R.
