## **Footprint Vancouver:**

**Living within a Fair Share Ecological Footprint** Robert Vale, Brenda Vale, 2013-09-02 According to many authorities the impact of humanity on the earth is already overshooting the earth's capacity to supply humanity's needs. This is an unsustainable position. This book does not focus on the problem but on the solution by showing what it is like to live within a fair earth share ecological footprint. The authors describe numerical methods used to calculate this, concentrating on low or no cost behaviour change rather than on potentially expensive technological innovation. They show what people need to do now in regions where their current lifestyle means they are living beyond their ecological means, such as in Europe, North America and Australasia. The calculations focus on outcomes rather than on detailed discussion of the methods used. The main objective is to show that living with a reduced ecological footprint is both possible and not so very different from the way most people currently live in the west. The book clearly demonstrates that change in behaviour now will avoid some very challenging problems in the future. The emphasis is on workable, practical and sustainable solutions based on quantified research rather than on generalities about overall problems facing humanity.

**Planning on the Edge** Penny Gurstein, Tom Hutton, 2019-12-01 Vancouver is heralded around the world as a model for sustainable development. In *Planning on the Edge*, nationally and internationally renowned planning scholars, activists and Indigenous leaders assess whether the city's reputation is warranted. While recognizing the many successes of the Vancouverism model, the contributors acknowledge that the forces of globalization and speculative property development have increased social inequality and housing insecurity since the 1980s in the city and the region. To determine the city's prospects for overcoming these problems, they look at city planning from all angles, including planning for the Indigenous population, environmental and disaster planning, housing and migration, and transportation and water management. By looking at policies at the local, provincial and federal levels and taking reconciliation with Indigenous peoples into account, *Planning on the Edge* highlights the kinds of policies and practices needed to reorient Vancouver's development trajectory along a more environmentally sound and equitable path.

**Toward Sustainable Communities** Mark Roseland, 2012-07-17 Helps citizens and their governments apply the concept of sustainable development in their communities. Original.

This book highlights emerging tech hubs in cities like Bangalore, Berlin and Toronto, exploring what makes them unique and how they support startups. Discover the diverse ecosystems, resources and talent pools that make these cities ideal for tech entrepreneurs. Whether you're looking to start a company or relocate for career opportunities, this book offers a global perspective on where the next wave of innovation is happening.

**Natures Past** Paolo Squatriti, 2007 A global examination of how human communities have interacted with different kinds of natural environments through their cultural, social and economic activities.

**Communities, Development, and Sustainability across Canada** John T. Pierce, Ann Dale, 2011-11-01 What is a sustainable community The pressing need to answer this simple question is what prompted John Pierce and Ann Dale to gather the essays in this volume Communities Development and Sustainability across Canada is a timely synthesis of work on how Canadian communities can achieve sustainable development It bridges the gap between theory and praxis and brings together academics policy makers and community activists all of whom have argued for increased local participation in sustainable community development Communities have become the weak link in efforts to refashion relations between the environment and the economy The goal of this book is not simply to describe problems but also to suggest answers not simply to offer theory but also to promote action so that Canadian communities can better achieve sustainable development

The twelve essays are organized into four sections Vision Connections Action and Assessing Progress The first and last sections discuss local sustainable development within the context of increasing globalization The second section approaches sustainable development from the perspective of social evolution and urban systems The third section the heart of the book is comprised of three community case studies an assessment of the Pacific salmon fishery and four general discussions of sustainable development The conclusion reiterates the need to make communities stronger links in sustainable development The message of Communities Development and Sustainability across Canada is clear it is time for communities themselves to act if they are to achieve sustainable development This provocative and persuasive book will prove to be a valuable guide to taking the first steps     Sustainable Transport Rodney Tolley,2003-09-10 With a wide range of contributions from America Australia Europe as well as the UK Creating Sustainable Transport sums up many of the lessons learned and how they can be applied in improved planning Non motorized transport planning depends on combining improvements to infrastructure with education The book examines both national strategies and local initiatives in cities around the world including such topics as changes to existing road infrastructure and the integration of cycling and walking with public transport The contributors consider topics such as developing healthier travel habits and ways of promoting cycling and walking as alternatives to the car     **Understanding Urban Ecosystems** Alan R. Berkowitz,Charles H. Nilon,Karen S. Hollweg,2006-05-29 Nowhere on Earth is the challenge for ecological understanding greater and yet more urgent than in those parts of the globe where human activity is most intense cities People need to understand how cities work as ecological systems so they can take control of the vital links between human actions and environmental quality and work for an ecologically and economically sustainable future An ecosystem approach integrates biological physical and social factors and embraces historical and geographical dimensions providing our best hope for coping with the complexity of cities This book is a first of its kind effort to bring together leaders in the biological physical and social dimensions of urban ecosystem research with leading education researchers administrators and practitioners to show how an understanding of urban ecosystems is vital for urban dwellers to grasp the fundamentals of ecological and environmental science and to understand their own environment     **The Urban Sociology Reader** Jan Lin,Christopher Mele,2013 This reader draws together seminal selections spanning the subfield from the 19th to the 21st centuries Contributions from Simmel Wirth Park Burgess Zukin Sassen Smith and Castells are amongst the 40 selections     **Sustainable Urbanisation** Adriana Allen,Nicholas You,2002     Rationing Earth Herb Bentz, Our economy has spiralled out of control with too much focus on the quantity of production The way to reduce this wasteful overproduction of goods and services is to increase their quality In this groundbreaking book industrial designer Herb Bentz explains how to fix the economy and break the environment versus economy deadlock Bentz tells us how the use of good design can improve the quality of what we produce and how a beneficial growth in quality can substitute for the destructive increase in quantity Tying together many diverse aspects of the economy economic growth unemployment the welfare state

and the need to ration Rationing Earth provides a critical analysis and a way forward at this crucial moment Despite high wealth in rich countries there is still poverty and inadequate funding for social programs This unjustified austerity has resulted in a persistence of economic insecurity the proliferation of poor quality products and inadequate action on environmental problems Bentz provides an economic solution from a designer s perspective By using elements of design thinking to achieve an overarching synthesis of the world s challenging problems including effectiveness of government the opposing demands of capital and labour positive and negative effects of technology and the absolute boundaries of a finite earth he presents practical solutions to the conflicting needs for economic growth full employment and reduced consumption In each of these areas Rationing Earth addresses the toughest questions How will we adapt to less economic growth How do we solve unemployment What is the proper role of government And how can we create an economy that effectively rations scarce resources without reducing prosperity Bentz blends an entertaining style with a concise but broad analysis that is provocative informative and pertinent to anyone interested in economic change that has a positive impact on the environment

*Carbon Footprints as Cultural-Ecological Metaphors* Anita Girvan,2017-10-10 Through an examination of carbon footprint metaphors this books demonstrates the ways in which climate change and other ecological issues are culturally and materially constituted through metaphor The carbon footprint metaphor has achieved a ubiquitous presence in Anglo North American public contexts since the turn of the millennium yet this metaphor remains under examined as a crucial mediator of political responses to the urgent crisis of climate change Existing books and articles on the carbon footprint typically treat this metaphor as a quantifying metric with little attention to the shifting mediations and practices of the carbon footprint as a metaphor This gap echoes a wider gap in understanding metaphors as key figures in mediating more than human relations at a time when such relations profoundly matter As a timely intervention this book addresses this gap by using insights from environmental humanities and political ecology to discuss carbon footprint metaphors in popular and public texts This book will be of great interest to researchers and students of environmental humanities political ecology environmental
