Incorporating Science, Economics, and Sociology in Developing Sanitary and Phytosanitary Standards in International Trade National Research Council,Board on Agriculture and Natural Resources,2000-05-31 The rapid expansion of international trade has brought to the fore issues of conflicting national regulations in the area of plant animal and human health These problems include the concern that regulations designed to protect health can also be used for protection of domestic producers against international competition At a time when progressive tariff reform has opened up markets and facilitated trade in part responding to consumer demands for access to a wide choice of products and services at reasonable prices closer scrutiny of regulatory measures has become increasingly important At the same time there are clear differences among countries and cultures as to the types of risk citizens are willing to accept The activities of this conference were based on the premise that risk analyses i e risk assessment management and communication are not exclusively the domain of the biological and natural sciences the social sciences play a prominent role in describing how people in different contexts perceive and respond to risks Any effort to manage sanitary and phytosanitary SPS issues in international trade must integrate all the sciences to develop practices for risk assessment management and communication that recognize

international diversity in culture experience and institutions Uniform international standards can help but no such norms are likely to be acceptable to all countries Political and administrative structures also differ causing differences in approaches and outcomes even when basic aims are compatible Clearly there is considerable room for confusion and mistrust The issue is how to balance the individual regulatory needs and approaches of countries with the goal of promoting freer trade This issue arises not only for SPS standards but also in regard to regulations that affect other areas such as environmental quality working conditions and the exercise of intellectual property rights This conference focused on these issues in the specific area of SPS measures This area includes provisions to protect plant and animal health and life and more generally the environment and regulations that protect humans from foodborne risks The Society for Risk Analysis defines a risk as the potential for realization of unwanted adverse consequences to human life health property or the environment estimation of risk is usually based on the expected value of the conditional probability of the event occurring times the consequence of the event given that it has occurred The task of this conference and of this report was to elucidate the place of science culture politics and economics in the design and implementation of SPS measures and in their international management The goal was to explore the critical roles and the limitations of the biological and natural sciences and the social sciences such as economics sociology anthropology philosophy and political science in the management of SPS issues and in judging whether particular SPS measures create unacceptable barriers to international trade The conference s objective also was to consider the elements that would compose a multidisciplinary analytical framework for SPS decision making and needs for future research

Genes, Trade, and Regulation Thomas Bernauer,2016-06-28 Agricultural or green biotechnology is a source of growing tensions in the global trading system particularly between the United States and the European Union Genetically modified food faces an uncertain future The technology behind it might revolutionize food production around the world Or it might follow the example of nuclear energy which declined from a symbol of socioeconomic progress to become one of the most unpopular and uneconomical innovations in history This book provides novel and thought provoking insights into the fundamental policy issues involved in agricultural biotechnology Thomas Bernauer explains global regulatory polarization and trade conflict in this area He then evaluates cooperative and unilateral policy tools for coping with trade tensions Arguing that the tools used thus far have been and will continue to be ineffective he concludes that the risk of a full blown trade conflict is high and may lead to reduced investment and the decline of the technology Bernauer concludes with suggestions for policy reforms to halt this trajectory recommendations that strike a

Food safety considerations to achieve best health outcomes under limited food availability situations Food and Agriculture Organization of the United Nations,2022-02-25 Food security means that all people at all times have physical social and economic access to sufficient safe and nutritious food that meets their food preferences and dietary needs for an active and healthy life Food safety is interlinked with and essential to achieving food security In times of food insecurity humanitarian relief in the form of food aid is often distributed by specialized organizations such as the United Nations World Food Programme WFP Under conditions of food assistance there are food safety considerations that must be taken in account so as to carefully evaluate the impact on food availability while minimizing the risk of exposure to foodborne contaminants among the receiving population who may already be vulnerable to malnutrition This case study lays out food safety consideration that might be helpful in situations where the impact of limited food availability is mitigated through food aid which is meant to ensure acceptable health using two scenarios lead in maize and fumonisins in cereal grains Risk management and recommendations are also provided on how to address these food safety issues New Frontiers in Environmental and Social Labeling Ulrike Grote,Arnab K. Basu,Nancy H. Chau,2007-02-17 This volume provides an in depth look at labeling and its relation to the governance of global trade The book aims at bridging the research gaps related to the link between consumers perception of a label with their willingness to pay the impact and the limitations of labeling in the event of food safety hazards and the trade and development dimensions of labeling As such this volume opens a new frontier on issues related to the economics of labeling *Global Challenges - Local Responses* Daniel Fleming,2006 Free Markets and Social Regulation:A Reform Agenda of the Global Trading System Toward a New International Economic Law Sungjoon Cho,2003-01-01 Free Markets and Social Regulation A Reform Agenda of the Global Trading System has a twofold purpose to consider what has so far been accomplished in this vital mission in the field of international economic law and to prescribe some solutions to continuing problems This latter endeavor amounts to a coherent and integrated plan that will enhance the acceptability of free markets to governments traders and other stakeholders alike *Food Safety and International Competitiveness* John Spriggs,Grant Isaac,2001 Food safety is currently one of the most important issues confronting consumers producers and distributors It cannot be dealt with as just a physical problem but must be considered as a multi dimensional one affected by politics economics and social influences This book focuses on the specific example of food safety in the beef industry in the USA Canada the UK and Australia It outlines the experience of a number of countries with food safety problems such as BSE and examines drivers for change and institutional arrangements within the four countrieswhether there is a socially optimal approach to food safetyhow much consumers can rely on the industry to police itself and governments to look after their interestsIt also examines the implications for competitiveness and world trade

Food Safety Issues in the Developing World Laurian Unnevehr, Nancy Hirschhorn, 2000-01-01 Food safety is receiving more attention worldwide with the rising incidence of foodborne disease concern over new potential hazards and growth in agricultural trade Investments to improve food safety in developing countries can reduce the burden of disease and remove the barriers to fresh food product exports providing another source of income for the rural sector International disputes over sanitary and phytosanitary SPS measures influence the ability of developing countries to compete in export markets These countries need to evaluate their interest in the SPS agreement under the World Trade Organisation WTO participate more fully in international agencies responsible for harmonisation develop the capacity to assess equivalence for process standards which are increasingly used for fresh food products and resist the imposition of inappropriate standards **Global Food Trade and Consumer Demand for Quality** Barry Krissoff, Mary Bohman, Julie Caswell, 2013-03-14 Consumers have always been concerned about the quality and particularly the safety of the foods they eat In recent years this concern has taken on additional prominence Consumer focus on food safety has been sharpened by reports about new risks such as that posed by mad cow disease and about more familiar sources of risk such as food borne pathogens pesticides and hormones At the same time some consumers are increasingly interested in knowing more about how their food is produced and in selecting products based on production practices Some of the questions consumers are asking include whether food is produced with the use of modern biotechnology whether it is organically produced how animals are treated in meat and egg production systems and whether food is produced using traditional methods Recent trends also show increased consumer demand for a variety of food products that are fresh tasty and available on a year round basis This has fostered increased global trade in food For example consumers in temperate climates such as North America are able to buy raspberries throughout the year and Europeans can enjoy South American coffee Trade in processed food products is actually increasing more rapidly than trade in agricultural commodities further addressing the demand for variety among consumers
