Footprints in Micrometeorology and Ecology Monique Y. Leclerc,Thomas Foken,2014-06-17 How to interpret meteorological measurements made at a given level over a surface with regard to characteristic properties such as roughness albedo heat moisture carbon dioxide and other gases is an old question which

goes back to the very beginnings of modern micrometeorology. It is made even more challenging when it is unclear whether these measurements are only valid for this point region and precisely describe the conditions there or if they are also influenced by surrounding areas. After 50 years of field experiments it has become both apparent and problematic that meteorological measurements are influenced from surfaces on the windward side. As such, extending these measurements for inhomogeneous experimental sites requires a quantitative understanding of these influences. When combined with atmospheric transport models similar to air pollution models, the footprint concept, a fundamental approach introduced roughly 20 years ago, provides us with information on whether or not the condition of upwind site homogeneity is fulfilled. Since these first models, the development of more scientifically based versions, validation experiments, and applications has advanced rapidly. The aim of this book is to provide an overview of these developments, to analyze present deficits, to describe applications, and to advance this topic at the forefront of micrometeorological research.

Computational Science and Its Applications - ICCSA 2025 Workshops Osvaldo Gervasi, Beniamino Murgante, Chiara Garau, Yeliz Karaca, Maria Noelia Faginas Lago, Francesco Scorza, Ana Cristina Braga, 2025-07-05. The fourteen volume set LNCS 15886-15899 constitutes the papers of several workshops which were held in conjunction with the 25th International Conference on Computational Science and Its Applications ICCSA 2025 held in Istanbul, Turkey, during June 30-July 3, 2025. The 362 full papers, 37 short papers, and 2 PhD showcases included in this book were carefully reviewed and selected from 1043 submissions. In addition, the conference consisted of 58 workshops focusing on very topical issues of importance to science, technology, and society, from new mathematical approaches for solving complex computational systems to information and knowledge in the Internet of Things, new statistical and optimization methods, several Artificial Intelligence approaches, sustainability issues, smart cities, and related technologies.

Generative AI and ML Algorithms for Maximizing Sustainability and Reducing Carbon Footprints in Smart Residential Energy Systems Venkata Narasareddy Annapareddy, Adaptive Strategies for Green Economy and Sustainability Policies Yıldırım, Seda, Demirtaş, Işıl, Malik, Firdous Ahmad, 2025-03-07. In the urgent quest to combat climate change, countries worldwide are increasingly turning to green economy approaches to meet their environmental goals. With the 2030 Sustainable Development Goals (SDGs) looming closer, the race to implement adaptive strategies and sustainable policies has intensified. As nations grapple with the challenges exacerbated by the post-COVID-19 era, identifying and adopting effective green practices has become more crucial than ever. This period underscores the need for innovative alternative sustainable policies that can drive societies toward a greener future. Adaptive Strategies for Green Economy and Sustainability Policies offers valuable insights into the practical and theoretical aspects of green economy and sustainability policies, serving as a crucial resource for academics, researchers, and professionals. It explores a range of topics related to green practices and adaptive strategies, equipping readers with knowledge on successful approaches and policies. By presenting exemplary practices and detailed analyses, the book provides a comprehensive guide to understanding and
