From A To Zippy:

Lost and Found Bill Griffith, 2012-01-30 Bill Griffith is best known as the creator of the Zippy daily comic strip currently running in over 300 newspapers nationwide but Zippy was conceived as an underground comix character before he became embraced in the mainstream. Beginning in 1969 Griffith contributed stories to a long list of legendary undergrounds. *Lost and Found* is not only a collection of these underground comix hand-picked by the artist himself but a mini memoir of the artist's comix career during the early days of the San Francisco Underground and his nearly twenty-year on-again-off-again involvement with Hollywood and TV. This collection from one of the great pioneering cartoonists also features Griffith's comics for *High Times*, *The National Lampoon*, *The San Francisco Examiner* and *The New Yorker*

sed & awk Dale Dougherty, Arnold Robbins, 1997-03-01 *sed* and *awk* describes two text processing programs that are mainstays of the UNIX programmer's toolbox. *sed* is a stream editor for editing streams of text that might be too large to edit as a single file or that might be generated on the fly as part of a larger data processing step. The most common operation done with *sed* is substitution replacing one block of text with another. *awk* is a complete programming language. Unlike many conventional languages *awk* is data-driven; you specify what kind of data you are interested in and the operations to be performed when that data is found. *awk* does many things for you including automatically opening and closing data files, reading records, breaking the records up into fields and counting the records. While *awk* provides the features of most conventional programming languages it also includes some unconventional features such as extended regular expression matching and associative arrays. *sed* and *awk* describes both programs in detail and includes a chapter of example *sed* and *awk* scripts. This edition covers features of *sed* and *awk* that are mandated by the POSIX standard. This most notably affects *awk* where POSIX standardized a new variable *CONVFMT* and new functions *toupper* and *tolower*. The *CONVFMT* variable specifies the conversion format to use when converting numbers to strings. *awk* used to use *OFMT* for this purpose. The *toupper* and *tolower* functions each take a presumably mixed case string argument and return a new version of the string with all letters translated to the corresponding case. In addition, this edition covers GNU *sed*, newly available since the first edition. It also updates the first edition coverage of Bell Labs *nawk* and GNU *awk*. *gawk* covers *mawk*, an additional freely available implementation of *awk*, and briefly discusses three commercial versions of *awk*: *MKS awk*, *Thompson Automation awk*, *tawk*, and *Videosoft VSAwk*
