From Being To Becoming Time And Complexity In The Physical Sciences:

From being to becoming Ilya Prigogine, 1980 *Being and becoming* Jose Luis Perez Velazquez, Vera Nenadovic, 2021-08-25 Many people spend considerable time seeking a sense of purpose in life and concomitant with that a sense of personal identity This book demystifies this search revealing why this search is a fallacy The purpose is to inform readers about results in neuroscience and biophysics that may guide us to some liberation needed in the current age of great complexity in life with a diverse burden of chores a deliverance from some afflictions that prevent individuals from achieving the true purpose of our lives Among these afflictions we find two primordial concerns the belief and subsequent attachment to a self and the conviction that life must have a deep purpose in which we are major players While this is a scientific text it can easily be read by a lay audience written with minimal technical jargon and with references to scientific papers enough to satisfy the curious We have tried to extract the essence of scientific observations such that we can glimpse at those aforementioned concerns about the self and life observations which help us comprehend what we are and what we become the being and becoming of our own selves and natural phenomena around us Jose Luis Perez Velazquez received a PhD in Molecular Physiology Biophysics His research seeks principles of biological organisation He worked at the Hospital for Sick Children in Toronto and was Professor at the University of Toronto Currently he is a Research Scholar at the Ronin Institute and lives in the natural paradise of Asturias in Northern Spain Vera Nenadovic is a nurse practitioner neuroscientist and entrepreneur She has 30 years of experience in healthcare from First Nations communities to intensive care units Her research focuses on predicting brain injury outcomes She is a clinician and researcher at Holland Bloorview Kids Rehab Hospital Her startup company BrainsView is commercializing software that analyzes brainwaves to monitor brain function and recovery after head injury She is married and lives in Toronto with her husband and Rottweiler *Nonlinear Physics For Beginners: Fractals, Chaos, Solitons, Pattern Formation, Cellular Automata And Complex Systems* Lui Lam, 1998-03-31 Almost all real systems are nonlinear For a nonlinear system the superposition principle breaks down The system's response is not proportional to the stimulus it receives the whole is more than the sum of its parts The three parts of this book contains the basics of nonlinear science with applications in physics Part I contains an overview of fractals chaos solitons pattern formation cellular automata and complex systems In Part II 14 reviews and essays by pioneers as well as 10 research articles are reprinted Part III collects 17 students projects with computer algorithms for simulation models included The book can be used for self study as a textbook for a one semester course or as supplement to other courses in linear or nonlinear systems The reader should have some knowledge in introductory college physics No mathematics beyond calculus and no computer literacy are assumed **The SAGE Handbook of Innovation in Social Research Methods** Malcolm Williams, W Paul Vogt, 2011-03-11 Social research is a burgeoning field Of course it has many traditions and approaches but there is a high premium upon thinking differently and thinking anew because social life is never static or wholly predictable The Handbook

edited by internationally recognized scholars provides a comprehensive pitch perfect critical assessment of the field The main features of the Handbook are Clear organization into 4 parts dealing with The Social Context of Research Design and Data Collection Integrating The Analysis of New Data Types Sampling Inference and Measurement Clear cutting edge chapters on Objectivity Causation Organizing Social Research Correspondence Analysis Grounded Theory Conversational Surveys Mixed Methods Meta Analysis Optimal Matching Analysis GIS Analysis Quantitative Narrative Analysis Longitudinal Studies SEM MLM Qualitative Comparative Analysis Respondent Driven Sampling Brings together a glittering assembly of the key figures working in the field of research methods Demonstrates the continuities and productive tensions between classical traditions and real world research The result is a superbly organized text which will be required reading for anyone interested in the routes and future of social research It is an unparalleled teaching resource and a must have for serious social researchers

The Idea of Wilderness Max Oelschlaeger, 1991-01-01 How has the concept of wild nature changed over the millennia And what have been the environmental consequences In this broad ranging book Max Oelschlaeger argues that the idea of wilderness has reflected the evolving character of human existence from Paleolithic times to the present day An intellectual history it draws together evidence from philosophy anthropology theology literature ecology cultural geography and archaeology to provide a new scientifically and philosophically informed understanding of humankind's relationship to nature Oelschlaeger begins by examining the culture of prehistoric hunter gatherers whose totems symbolized the idea of organic unity between humankind and wild nature and idea that the author believes is essential to any attempt to define human potential He next traces how the transformation of these hunter gatherers into farmers led to a new awareness of distinctions between humankind and nature and how Hellenism and Judeo Christianity later introduced the unprecedented concept that nature was valueless until humanized Oelschlaeger discusses the concept of wilderness in relation to the rise of classical science and modernism and shows that opposition to modernism arose almost immediately from scientific literary and philosophical communities He provides new and in some cases revisionist studies of the seminal American figures Thoreau Muir and Leopold and he gives fresh readings of America's two prodigious wilderness poets Robinson Jeffers and Gary Snyder He concludes with a searching look at the relationship of evolutionary thought to our postmodern effort to reconceptualize ourselves as civilized beings who remain in some ways natural animals

Frontiers Steve Adams, 2002-01-04 The revolution in twentieth century physics has changed the way we think about space time and matter and our own place in the universe It has offered answers to many of the big questions of existence such as the ultimate nature of things and the how the universe came into being It has undermined our belief in a Newtonian mechanistic universe and a deterministic future posing questions about parallel universes time travel and the origin and end of everything At the same time we have witnessed amazing attempts at unification so that physicists are able to contemplate the discovery of a single theory of everything from which we could derive the masses and types of all particles and their interactions This book

tells the story of these discoveries and the people who made them largely through the work of Nobel Prize winning physicists

Interdisciplinary Approaches to Climate Change for Sustainable Growth Sara Valaguzza, Mark Alan Hughes, 2022-02-19

The book is an edited collection of contributions by a distinguished international panel of academics on the main scientific juridical and economic aspects involved in the mitigation and adaptation processes imposed by climate change Explicitly interdisciplinary the book transversally cuts through different disciplines offering an outline of a phenomenon that is too often left to specific and sectorial insights The volume is divided into four parts The first part introduces the main concepts of the book climate change and sustainability wellbeing and mitigation and adaptation The second part presents the scientific understanding of climate change and explores some of the more pressing issues driving policy development such as the melting of the glaciers and the impact on coastal areas The third part discusses significant experiences in the environmental policies both in the European Union and in the United States of America The last section explains possible approaches to climate change by exploring the legal and economic aspects of both adversarial and more lenient approaches towards a more sustainable world It faces four main issues in the economic and juridical context consumer behaviors climate litigations environmental litigations and the alternative forms of dispute resolution on environmental matters with particular regard to environmental mediation Offering a new vision of sustainable policies this volume will be of interest to researchers and students of environmental policy resource economics environmental law sustainable development and public administration as well as practitioners and policy makers working in related areas

Science and Religion J.W. Fennema, Paul

Iain, 2012-12-06 The world is increasingly becoming one It is at the same time one endangered ecosystem and one thriving market place with material and spiritual goods on competitive display And the good and evil things of life cannot easily be sorted out The world is becoming one also in the sense that it is better understood today than it was in earlier times that the material good and the spiritual good though seemingly belonging to different realms of fact defined by their respective modes of existence together constitute effectively one and the same reality the modern world of science technology computerized administration and power that calls upon humankind to struggle for a just participatory and sustainable society and to strive for a society of the future that will be the world over both long lived and worth living The Second European Conference on Science and Religion held on 10-13th March 1988 on the campus of the Universiteit Twente Enschede The Netherlands was meant to be a modest market place a forum where standpoints and opinions could be presented and criticized It was meant to offer an opportunity to meet and to make acquaintances in the expectation that the exchange of thoughts would lead to new conceptual horizons that would challenge what so far had been considered as hard fact or what until now had been looked upon as a distinctive feature of a well established view either of the kingdom of the sciences or of the realm of religion

Stretching Beyond the Horizon Jean Hillier, 2017-03-02

In this innovative work Jean Hillier develops a new theory for students and researchers of spatial planning and governance which is grounded primarily in the

work of Gilles Deleuze The theory recognizes the complex interrelation between place qualities and the multiple space time relational dynamics of spatial governance Using empirical examples from England and Australia Hillier identifies the power of networks and trajectories through which various actors territorialize space and explores the social and political responsibilities of spatial managers and decision makers She considers what spatial planning and urban management practices could look like if they were to be developed along Deleuzean lines and suggests alternative framings for spatial practice broad trajectories or visions of the longer term future and shorter term location specific detailed plans and projects with collaboratively determined tangible goals *Unmarked* Peggy Phelan,2003-09-02 *Unmarked* is a controversial analysis of the fraught relation between political and representational visibility in contemporary culture Written from and for the Left *Unmarked* rethinks the claims of visibility politics through a feminist psychoanalytic examination of specific performance texts including photography painting film theatre and anti abortion demonstrations *Being and Not Being* Richard Iveson,2023-12-06 Against the grain of many contemporary theoretical positions that indulge in delusions of safety and certainty *Being and Not Being* argues that contingency is definitive of the structure of being itself As a result any predictions about the future founded upon present or habitual states of being are necessarily subject to possible error given the unpredictability that is the condition of all emergent forms of being Rather than signal the absence of an ethical dimension this prior inscription of potential which gives rise to profoundly unforeseen forms of being necessarily invokes an a priori ethical demand that is common to biological and technological systems alike This ethical demand transforms the rules of critical and ethical engagement not simply with other inhuman forms of being but with the future itself Indeed this ethical demand requires us to pose serious questions about the legitimacy and usefulness of any decisions made today on the back of predicted futures that erroneously presume the absolute determinability of all beings lacking the alchemical privilege definitive of life As the exemplary figure of unfounded privilege it is with Hamlet that the question of life ultimately ends replaced instead by the extremophile as the figure of unforeseen futures that simply cannot be imagined in the present To be is the potential to be otherwise that is to say to not be that which a given being is **Complex Systems in the Social and Behavioral Sciences** L. Douglas Kiel,Euel W. Elliott,2021-06-22 *Complexity Systems in the Social and Behavioral Sciences* provides a sophisticated yet accessible account of complexity science or complex systems research Phenomena in the behavioral social and hard sciences all exhibit certain important similarities consistent with complex systems These include the concept of emergence sensitivity to initial conditions and interactions between agents in a system that yield unanticipated nonlinear outcomes The topics discussed range from the implications for artificial intelligence and computing to questions about how to model complex systems through agent based modeling to complex phenomena exhibited in international relations and in organizational behavior This volume will be an invaluable addition for both the general reader and the specialist offering new insights into this fascinating area of research *Soviet Union In The Context Of The Nobel*

Prize: Facts, Documents, Thoughts And Commentaries Abram Moiseevich Blokh, 2021-12-06 The result of meticulous research by Professor Abram Blokh this book presents facts documents thoughts and comments on the system of the Nobel Prize awards to Russian and Soviet scientists It provides a comprehensive overview of the relationship between the ideas expressed by the Nobel Foundation and those expressed by the autocratic and totalitarian regimes in Russia and the ex Soviet Union during the 20th century who had the same attitude of revulsion toward the intellectual and humanistic values represented by the Nobel Prizes To do his research the author had access to the declassified documents in the archives of the Nobel Foundation for many years Also included in the book are new materials obtained and developed by the author after the publication of the first two editions in Russian This additional information is from the archives of the Soviet Ministry of Foreign Affairs the Russian Academy of Sciences the Soviet Writers Union et al in Moscow and St Petersburg These documents shed new light on the difficulties encountered during the attempts to integrate Russian and Soviet science into the world's intellectual community This book would be of utmost interest to those who are interested in the history of science in Russia and the ex Soviet Union related to the Nobel Prize

Paths from Science Towards God Arthur R. Peacocke, 2013-10-01 Author is winner of 2001 Templeton Prize for Progress in Religion worth 1 million dollars By applying the principles of scientific thought to theological matters Arthur Peacocke argues that the divine principle is at work behind all aspects of existence both spiritual and physical This study tackles head on such fundamental issues as how evolution can be reconciled with creation and the relationship between Newton causality and divine action He concludes with an optimistic new theology for our brave new world

High-speed Society Hartmut Rosa, 2010-11-01 Everywhere life seems to be speeding up we talk of fast food and speed dating But what does the phenomenon of social acceleration really entail and how

new is it While much has been written about our high speed society in the popular media serious academic analysis has lagged behind and what literature there is comes more from Europe than from America This collection of essays is a first step toward exposing readers on this side of the Atlantic to the importance of this phenomenon and toward developing some preliminary conceptual categories for better understanding it Among the major questions the volume addresses are these Is acceleration occurring across all sectors of society and all dimensions of life or is it affecting some more than others Where is life not speeding up and what results from this disparity What are the fundamental causes of acceleration as well as its consequences for everyday experience How does it affect our political and legal institutions How much speed can we tolerate The volume tackles these questions in three sections Part 1 offers a selection of astute early analyses of acceleration as experienced in the late nineteenth and early twentieth centuries Part 2 samples recent attempts at analyzing social acceleration including translations of the work of leading European thinkers Part 3 explores acceleration s political implications

Becoming Hewlett Packard Robert A. Burgelman, Webb McKinney, Philip E. Meza, 2017 This book documents how HP s successive CEOs have contributed to the company s process of corporate becoming The strategic leadership frameworks used to illuminate these contributions will be helpful for theory development and offer practical tools for founders of new companies and CEOs and boards of directors of existing companies

The Touchstone of Life Werner R. Loewenstein, 1999-01-07 No one can escape a sense of wonder when looking at an organism from within From the humblest amoeba to man from the smallest cell organelle to the amazing human brain life presents us with example after example of highly ordered cellular matter precisely organized and shaped to perform coordinated functions But where does this order spring from How does a living organism manage to do what nonliving things cannot do bring forth and maintain all that order against the unrelenting disordering pressures of the universe In *The Touchstone of Life* world renowned biophysicist Werner Loewenstein seeks answers to these ancient riddles by applying information theory to recent discoveries in molecular biology Taking us into a fascinating microscopic world he lays bare an all pervading communication network inside and between our cells a web of extraordinary beauty where molecular information flows in gracefully interlaced circles Loewenstein then takes us on an exhilarating journey along that web and we meet its leading actors the macromolecules and see how they extract order out of the erratic quantum world and through the powerful lens of information theory we are let in on their trick the most dazzling of magician s acts whereby they steal form out of formlessness *The Touchstone of Life* flashes with fresh insights into the mystery of life Boldly straddling the line between biology and physics the book offers a breathtaking view of that hidden world where molecular information turns the wheels of life Loewenstein makes these complex scientific subjects lucid and fascinating as he sheds light on the most fundamental aspects of our existence

Integrating Economics, Ecology and Thermodynamics Matthias Ruth, 2013-04-17 Economies are open systems

embedded in an ecosystem with which they exchange matter and energy Interactions among these systems are vital for each system s performance and are constrained by the laws of physics This volume pays tribute to economy environment interactions simultaneously from an economic ecological and physical perspective Integrating Economics Ecology and Thermodynamics provides a first step in identifying and combining the principles of economics ecology and thermodynamics on a fundamental level Part I lays out the general context for the approach chosen Part II familiarizes readers with core concepts of and methods used in the three disciplines of economics ecology and thermodynamics Part III assesses ways in which these disciplines can be integrated to provide an improved understanding of economy environment interactions Part IV illustrates the integration of the three disciplines with a dynamic model of a human community interacting with its environment In Part V the volume closes with a brief summary and a set of conclusions on the relevance of integrated interdisciplinary approaches to economy environment interactions
