

Phillip Tobias In the 1950s Phillip Tobias participated in several expeditions to the Kalahari. His influence was significant in South Africa, and in many ways marks a natural transition between earlier times and the modern era exemplified by the Marshalls. He was also important in bringing Bushmen to the attention of a wider anthropological public through articles.

Sir Laurens van der Post was the face of the Bushman to the worldwide general public, but the interest he attracted rubbed off on anthropology too. He mistrusted 'scientists' with their specialized knowledge and inability to think beyond the confines of their disciplines; and they disliked his mysticism and self-promoting ego, his inability to speak any Bushman language, the short duration of his time in the Kalahari, and his cavalier attitude to differences between Bushman groups.

From Primitives to Primates David Van Reybrouck, 2012 Where do our images about early hominids come from In this fascinating in depth study David Van Reybrouck demonstrates how input from ethnography and primatology has deeply influenced our visions about the past from the 19th century to this day often far beyond the available evidence Victorian scholars were keen to look at contemporary Australian and Tasmanian aborigines to understand the enigmatic Neanderthal fossils Likewise today's primatologists debate to what extent bonobos baboons or chimps may be regarded as stand ins for early human ancestors The belief that the contemporary world provides living links still goes strong Such primate models Van Reybrouck argues continue the highly problematic comparative method of the Victorian times He goes on to show how the field of ethnoarchaeology has succeeded in circumventing the major pitfalls of such analogical reasoning A truly interdisciplinary study this work shows how scholars working in different fields can effectively improve their methods for interpreting the deep past by understanding the historical challenges of adjacent disciplines Overviewing two centuries of intellectual debate in fields as diverse as archaeology ethnography and primatology Van Reybrouck's book is one long plea for trying to understand the past on its own terms rather than as facile projections from the present David Van Reybrouck Bruges 1971 was trained as an archaeologist at the universities of Leuven Cambridge and Leiden Before becoming a highly successful literary author *The Plague* *Mission Congo* he worked as a historian of ideas For more than twelve years he was co editor of *Archaeological Dialogues* In 2011-12 he held the prestigious Cleveringa Chair at the University of Leiden

Species, Species Concepts and Primate Evolution William H. Kimbel, Lawrence B. Martin, 2013-12-18 A world of categories devmd of spirit waits for life to return Saul Bellow Humboldt s Gift The stock in trade of communicating hypotheses about the historical path of evolution is a graphical

representation called a phylogenetic tree. In most such graphics, pairs of branches diverge from other branches successively, marching across abstract time toward the present. To each branch is tied a tag with a name, a binominal symbol that functions as does the name given to an individual human being. On phylogenetic trees, the names symbolize species. What exactly do these names signify? What kind of information is communicated when we claim to have knowledge of the following types?

Tetonia mathewzi was ancestral to *Pseudotetonia ambiguus*. The sample of fossils attributed to *Homo habilis* is too variable to contain only one species. Interbreeding populations of savanna baboons all belong to *Papio anubis*. *Hylobates lar* and *H. pileatus* interbreed in zones of geographic overlap. While there is nearly universal agreement that the notion of the species is fundamental to our understanding of how evolution works, there is a very wide range of opinion on the conceptual content and meaning of such particular statements regarding species. This is because, oddly enough, evolutionary biologists are quite far from agreement on what a species is, how it attains this status, and what role it plays in evolution over the long term.
