in 1996 and that led to President Clinton's positive assessment. This study examines the early history of U.S.-Ukraine relations over the nuclear weapons issue. It presents both the history of a 2-year period (1992-1994) and posits a number of explanations as to why things developed the way they did. The goal is to establish a framework of this important period from which scholars can further proceed.

Managing crises in defense industry Steven R. Linke, 1996. National planning for the expeditious recovery and expansion of essential industrial production facilities is often geared only to large-scale declared emergencies. Under the worst scenario of a global war, all necessary authorities and funding are assumed to be available. But more often, lesser emergencies require responses without the broad powers and commitment associated with a declared national emergency. A real emergency can provide insight into the appropriateness of planned management approaches and the adequacy of available authorities. This account of two actual emergencies provides lessons on how statutory procedures could be improved, regulations clarified, the government data base expanded, and steps taken to speed up the process to be followed in the event of other crises. In May 1988, the United States lost half of its capacity to produce ammonium perchlorate when explosions and fire destroyed one of the two producing plants. Ammonium perchlorate is the oxidizer essential to solid fuel rocket motors. Here, without question, was an excellent test case. Existing ammonium perchlorate had to be carefully allocated, and additional production capacity was needed. Numerous ongoing production programs for both strategic and conventional systems needed the product, and some would be curtailed if sufficient ammonium perchlorate was not available. This paper documents the government's actions and decision-making process in dealing with various legal and administrative hurdles in both restoring the capacity and allocating available ammonium perchlorate.

Understanding Land Warfare

Christopher Tuck, 2022-06-22. This textbook provides a thorough grounding in the vocabulary, concepts, issues, and debates associated with modern land warfare. The second edition has been updated and revised and includes new chapters on non-western perspectives and hybrid warfare. Drawing on a range of case studies spanning the First World War through to contemporary conflicts in Syria, Ukraine, and Nagorno Karabakh, the book explores what is unique about the land domain and how this has shaped the theory and practice of military operations conducted upon it. It also looks at land warfare across the spectrum of its conduct, including conventional campaigning, counterinsurgency, and peace support and stabilisation operations. Key themes and debates identified and analysed include the tensions between change and continuity, the role of technology in land warfare, the relevance of culture and context, the difficulties in translating theory into effective military practice, in-depth discussions on issues of immediate contemporary significance, including hybrid warfare, emerging military technologies, and the military reform processes of the US, Russian, and Chinese land forces. This book will be essential reading for military practitioners and for students of land warfare, military history, war studies, and strategic studies.
