From Animals To Animats:

From Animals to Animats 3 Dave Cliff, 1994 August 8-12 1994 Brighton England From Animals to Animats 3 brings together research intended to advance the frontier of an exciting new approach to understanding intelligence. The contributors represent a broad range of interests from artificial intelligence and robotics to ethology and the neurosciences. Unifying these approaches is the notion of animat, an artificial animal either simulated by a computer or embodied in a robot which must survive and adapt in progressively more challenging environments. The 58 contributions focus particularly on well defined models, computer simulations and built robots in order to help characterize and compare various principles and architectures capable of inducing adaptive behavior in real or artificial animals. Topics include: Individual and collective behavior, Neural correlates of behavior, Perception and motor control, Motivation and emotion, Action selection and behavioral sequences, Ontogeny, learning and evolution, Internal world models and cognitive processes, Applied adaptive behavior, Autonomous robots, Hierarchical and parallel organizations, Emergent structures and behaviors, Problem solving and planning, Goal directed behavior, Neural networks and evolutionary computation, Characterization of environments. A Bradford Book.

From Animals to Animats 2 Jean-Arcady Meyer, H. L. Roitblat, Stewart W. Wilson, 1993. More than sixty contributions in From Animals to Animats 2 by researchers in ethology, ecology, cybernetics, artificial intelligence, robotics and related fields investigate behaviors and the underlying mechanisms that allow animals and potentially robots to adapt and survive in uncertain environments. Jean Arcady Meyer is Director of Research CNRS Paris. Herbert L. Roitblat is Professor of Psychology at the University of Hawaii at Manoa. Stewart W. Wilson is a scientist at The Rowland Institute for Science, Cambridge, Massachusetts. Topics covered: The Animat Approach to Adaptive Behavior, Perception and Motor Control, Action Selection and Behavioral Sequences, Cognitive Maps and Internal World Models, Learning, Evolution, Collective Behavior. **From**

Animals to Animats 5 Rolf Pfeifer, 1998. The Animals to Animats Conference brings together researchers from ethology, psychology, ecology, artificial intelligence, artificial life, robotics, engineering and related fields to further understanding of the behaviors and underlying mechanisms that allow natural and synthetic agents, animats, to adapt and survive in uncertain environments. The Animals to Animats Conference brings together researchers from ethology, psychology, ecology, artificial intelligence, artificial life, robotics, engineering and related fields to further understanding of the behaviors and underlying mechanisms that allow natural and synthetic agents, animats, to adapt and survive in uncertain environments. The work presented focuses on well defined models, robotic computer simulation and mathematical that help to characterize and compare various organizational principles or architectures underlying adaptive behavior in both natural animals and animats.
