National Research Council,Division on Engineering and Physical Sciences,Commission on Engineering and Technical Systems,Aeronautics and Space Engineering Board,Committee on Earth-to-Orbit Transportation Options,1992-02-01 If the United States hopes to continue as a leader in space it must invest now in better earth to orbit technology by replacing obsolete launch facilities while also developing a new class of more robust and reliable vehicles From Earth to Orbit provides strategies to reduce launch costs while increasing the reliability and resiliency of vehicles It also recommends continued improvements for the Space Shuttle Orbiter and its subsystems and the development of a Space Transportation Main Engine STME **32nd AIAA/ASME/SAE/ASEE Joint Propulsion Conference & Exhibit** ,1996 *Access to space : the future of U.S. space transportation systems.* ,1990 Technology for Large Space Systems ,1990 **Solar Energy Update** ,1978-10

Satellite Power System ,1981 *Concepts of Operations for a Reusable Launch Vehicle* Michael A. Rampino,1997 The United States is embarked on a journey toward maturity as a spacefaring nation One key step along the way is development of a reusable launch vehicle RLV The most recent National Space Transportation Policy August 1994 assigned improvement and evolution of current expendable launch vehicles to the Department of Defense while National Aeronautical Space Administration NASA is responsible for working with industry on demonstrating RLV technology The purpose of this study is to help ensure the US military especially the USAF is prepared to take advantage of RLVs should the NASA led effort to develop an RLV demonstrator prove successful The focus of this study is an explanation of how the US military could use RLVs by describing and analyzing two concepts of operations Four major conclusions resulted from the analysis First RLVs have military potential They can perform a variety of missions including responsive spacelift reconnaissance and strike However the economic feasibility of using RLVs for earth to earth transportation is questionable Second design choices for an operational RLV will have effects on risk cost capability and operations efficiency Trade offs will have to be made between NASA commercial and military requirements if all three parties are to use the same fleet of RLVs Third increased investment in propulsion technology development is warranted to ensure success Fourth the top priority for the RLV program even from the military s perspective should remain cheap and responsive access to space The research led to three recommendations First the US military should become a more active participant in the RLV program to ensure its requirements are defined and incorporated Second America should not pursue development of operational RLVs before the technology is ready **Energy**
