Intrinsically Motivated Open-Ended Learning in Autonomous Robots Vieri Giuliano Santucci, Pierre-Yves Oudeyer, Andrew Barto, Gianluca Baldassarre, 2020-02-19 **Rule-Based Evolutionary Online Learning Systems** Martin V. Butz, 2006-01-04 Rule based evolutionary online learning systems often referred to as Michigan style learning classifier systems LCSs were proposed nearly thirty years ago Holland 1976 Holland 1977 originally calling them cognitive systems LCSs combine the strength of reinforcement learning with the generalization capabilities of genetic algorithms promising a flexible online generalizing solely reinforcement dependent learning system However despite several initial successful applications of LCSs and their interesting relations with animal learning and cognition understanding of the systems remained somewhat obscured Questions concerning learning complexity or convergence remained unanswered Performance in different problem types problem structures concept spaces and hypothesis spaces stayed nearly unpredictable This book has the following three major objectives 1 to establish a facetwise theory approach for LCSs that promote system analysis understanding and design 2 to analyze evaluate and enhance the XCS classifier system Wilson 1995 by the means of the facetwise approach establishing a fundamental XCS learning theory 3 to identify both the major advantages of an LCS based learning approach as well as the most promising potential application areas Achieving these three objectives leads to a rigorous understanding of LCS functioning that enables the successful application of LCSs to diverse problem types and problem domains The quantitative analysis of XCS shows that the interactive evolutionary based online learning mechanism works machine learning competitively yielding a low order polynomial learning complexity Moreover the facetwise analysis approach facilitates the successful design of more advanced LCSs including Holland's originally envisioned cognitive systems Martin V Intrinsically

Motivated Learning in Natural and Artificial Systems Gianluca Baldassarre, Marco Mirolli, 2013-03-29 It has become clear to researchers in robotics and adaptive behaviour that current approaches are yielding systems with limited autonomy and capacity for self improvement To learn autonomously and in a cumulative fashion is one of the hallmarks of intelligence and we know that higher mammals engage in exploratory activities that are not directed to pursue goals of immediate relevance for survival and reproduction but are instead driven by intrinsic motivations such as curiosity interest in novel stimuli or surprising events and interest in learning new behaviours The adaptive value of such intrinsically motivated activities lies in the fact that they allow the cumulative acquisition of knowledge and skills that can be used later to accomplish fitness enhancing goals Intrinsic motivations continue during adulthood and in humans they underlie lifelong learning artistic creativity and scientific discovery while they are also the basis for processes that strongly affect human well being such as the sense of competence self determination and self esteem This book has two aims to present the state of the art in research on intrinsically motivated learning and to identify the related scientific and technological open challenges and most promising research directions The book introduces the concept of intrinsic motivation in artificial systems reviews the relevant literature offers insights from the neural and behavioural sciences and presents novel tools for research The book is organized into six parts the chapters in Part I give general overviews on the concept of intrinsic motivations their function and possible mechanisms for implementing them Parts II III and IV focus on three classes of intrinsic motivation mechanisms those based on predictors on novelty and on competence Part V discusses mechanisms that are complementary to intrinsic motivations and Part VI introduces tools and experimental frameworks for investigating intrinsic motivations The contributing authors are among the pioneers carrying out fundamental work on this topic drawn from related disciplines such as artificial intelligence robotics artificial life evolution machine learning developmental psychology cognitive science and neuroscience The book will be of value to graduate students and academic researchers in these domains and to engineers engaged with the design of autonomous adaptive robots

Evolvable Systems: From Biology to Hardware Andy M. Tyrrell,Pauline C. Haddow,Jim Torresen,2007-10-08 The idea of evolving machines whose origins can be traced to the cybernetics movement of the 1940s and 1950s has recently resurged in the form of the nascent field of bio inspired systems and evolvable hardware The inaugural workshop Towards Evolvable Hardware took place in Lausanne in October 1995 followed by the First International Conference on Evolvable Systems From Biology to Hardware ICES held in Tsukuba Japan in October 1996 The second ICES conference was held in Lausanne in September 1998 with the third and fourth being held in Edinburgh April 2000 and Tokyo October 2001 respectively This has become the leading conference in the field of evolvable systems and the 2003 conference promised to be at least as good as if not better than the four that preceded it The fifth international conference was built on the success of its predecessors aiming at presenting the latest developments in the field In addition it brought together researchers who use biologically inspired concepts to implement real systems in artificial intelligence artificial life robotics VLSI design and related domains We would say that this fifth conference followed on from the previous four in that it consisted of a number of high quality interesting thought provoking papers
