Collected Papers Fritz John, 1985 **Fritz John Collected Papers** J. Moser, 1985-01-01 **Fritz John J.**

Moser, 2011-11-08 **Selected Papers on Algebra and Topology by Garrett Birkhoff** J.S. Oliveira, G.-C. Rota, 1987-01-01

The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology. To tie them together and to place them in context I have supplemented them by a series of brief essays sketching their historical background as I see it. In addition to these I have listed some subsequent papers by others which have further developed some of my key ideas. The papers on universal algebra, lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians. It may be helpful to make them readily accessible in one volume. I have tried in the introduction to each part to state the most significant features of each paper reprinted there and to indicate later developments. The background that shaped and stimulated my early work on universal algebra, lattice theory and topology may be of some interest. As a Harvard undergraduate in 1928-32 I was encouraged to do independent reading and to write an original thesis. My tutorial reading included de la Vallée Poussin's beautiful *Cours d'Analyse Infinitesimale*, Hausdorff's *Grundzüge der Mengenlehre* and Frechet's *Espaces Abstraits*. In addition I discovered Carathéodory's 1912 paper *Über das lineare Mass von Punktmengen* and Hausdorff's 1919 paper on *Dimension und Ausseres Mass* and derived much inspiration from them. A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published. This background led to the work summarized in Part IV.

Selected Papers of Norman Levinson J.A. Nohel, D.H. Sattinger, Gian-Carlo Rota, 1997-12-18. The deep and original ideas of Norman Levinson have had a lasting impact on fields as diverse as differential integral equations, harmonic complex stochastic analysis and analytic number theory during more than half a century. Yet the extent of his contributions has not always been fully recognized in the mathematics community. For example the horseshoe mapping constructed by Stephen Smale in 1960 played a central role in the development of the modern theory of dynamical systems and chaos. The horseshoe map was directly stimulated by Levinson's research on forced periodic oscillations of the Van der Pol oscillator and specifically by his seminal work initiated by Cartwright and Littlewood. In other topics Levinson provided the foundation for a rigorous theory of singularly perturbed differential equations. He also made fundamental contributions to inverse scattering theory by showing the connection between scattering data and spectral data thus relating the famous Gel'fand-Levitan method to the inverse scattering problem for the Schrödinger equation. He was the first to analyze and make explicit use of wave functions now widely known as the Jost functions. Near the end of his life Levinson returned to research in analytic number theory and made profound progress on the resolution of the Riemann Hypothesis. Levinson's papers are typically tightly crafted and masterpieces of brevity and clarity. It is our hope that the publication of these selected papers will bring his mathematical ideas to the attention of the larger mathematical community.

Fritz John J. Moser, 1985-01-01. The mathematical works of Fritz John

whose deep and original ideas have had a great influence on the development of various fields in mathematical analysis are made available with these volumes His works are certainly well known to the experts but knowledge of his contributions may not have spread as widely as it should have For example the concept of functions of bounded mean oscillations plays a central role in harmonic analysis today but it is perhaps less known that this class of functions was introduced by John as early as 1961 motivated by his work in elasticity theory With the publication of this collection a wider circle of mathematicians will become familiar with and appreciate the fertile ideas of Fritz John The organization of these two volumes was undertaken in consultation with the author It was decided not to present the papers in chronological order but rather to subdivide them into ten sections representing different mathematical topics to which John has contributed Commentaries made by experts in the fields are appended to each section Since the division into sections could of course not be made sharply there are several overlaps For instance the comments of Louis Nirenberg refer to Elasticity Theory VI Geometric Inequalities VIII and Functions of Bounded Mean Oscillations IX To help the reader cross references and remarks by the author will be found at the end of each section Mathematics Related to Physics Raoul Bott,1994 Volume 4

Mathematics from Leningrad to Austin, Volume 2 Rudolph A. Lorentz,1997-07-15 The works of George G Lorentz spanning more than 60 years have played a significant role in the development and evolution of mathematical analysis The papers presented in this volume represent a selection of his best works along with commentary from his students and colleagues Journal of the Mathematical Society of Japan Nihon Sūgakkai,1985 **The Mathematical Intelligencer**,1986 **Jakob Nielsen, Collected Mathematical Papers: 1932-1955** Jakob Nielsen,1986 *Books in Series*, 1876-1949 R.R.
