Martins, Farhat Yusuf, David A. Swanson, 2011-11-01 This is the book that market strategists have been waiting for to position themselves in global markets and take advantage of the opportunities that demographic bonuses and deficits offer to them and their products. It is also a book for teachers and students of consumer behaviour to grasp the importance of the life cycle as a framework that shapes the demand for goods and services determined by changes in social, economic and physical functioning. It gives insights into gendered consumer behaviour and cohort effects. It presents a range of views on consumer behaviour and how demographic perspectives enhance these perspectives. The book offers conceptual and analytical tools that can be used in the assessment of population characteristics as determinants of market size, composition and potential for a variety of products. It offers organising frameworks as well as empirical evidence of consumer behaviour in clusters of markets with different rates of population growth and age distribution that affect consumers' priorities and demand for basic and progressive commodities. The book shows commonalities as well as differences in consumer behaviour arising from different cultures and social customs. It uses analytical tools that are explained and accessible to readers with a range of competences. It is a book that can give a better understanding of consumer behaviour and market opportunities to the practitioner. It can also be used for the instruction of students in demography, consumer behaviour and marketing. *Cities Transformed* Mark R. Montgomery, Richard Stren, Barney Cohen, Holly E. Reed, 2013-10-31

Over the next 20 years, most low income countries will for the first time become more urban than rural. Understanding demographic trends in the cities of the developing world is critical to those countries, their societies, economies and environments. The benefits from urbanization cannot be overlooked, but the speed and sheer scale of this transformation presents many challenges. In this uniquely thorough and authoritative volume, 16 of the world's leading scholars on urban population and development have worked together to produce the most comprehensive and detailed analysis of the changes taking place in cities and their implications and impacts. They focus on population dynamics, social and economic differentiation, fertility and reproductive health, mortality and morbidity, labor force and urban governance. As many national governments decentralize and devolve their functions, the

nature of urban management and governance is undergoing fundamental transformation with programs in poverty alleviation health education and public services increasingly being deposited in the hands of untested municipal and regional governments Cities Transformed identifies a new class of policy maker emerging to take up the growing responsibilities Drawing from a wide variety of data sources many of them previously inaccessible this essential text will become the benchmark for all involved in city level research policy planning and investment decisions The National Research Council is a private non profit institution based in Washington DC providing services to the US government the public and the scientific and engineering communities The editors are members of the Council s Panel on Urban Population Dynamics
