From Knowledge To Power The Rise Of The Science Empire In France 1860 1939:

From Knowledge to Power Harry W. Paul, 1985 The first full scale treatment of a period of dramatic expansion in French science Physics in the Nineteenth Century Robert D. Purrington, 1997 Putting physics into the historical context of the Industrial Revolution and the European nation state Purrington traces the main figures including Faraday Maxwell Kelvin and Helmholtz as well as their interactions experiments discoveries and debates The success of nineteenth century physics laid the foundation for quantum theory and relativity in the twentieth Robert D Purrington is a professor of physics at Tulane University and coauthor of *Frame of the Universe* **A History of Science in Society, Volume II** Andrew Ede, Lesley B. Cormack, 2016-09-29 A History of Science in Society is a concise overview that introduces complex ideas in a non technical fashion Ede and Cormack trace the history of the changing place of science in society and explore the link between the pursuit of knowledge and the desire to make that knowledge useful Volume II covers from the Scientific Revolution until the present day New topics in this edition include science and the corporate world the regulation of science and technology and climate change New Connections features provide in depth exploration of the ways science and society interconnect The text is accompanied by 38 colour maps and diagrams and 4 colour plates highlighting key concepts and events Essay questions chapter timelines a further readings section and an index provide additional support for students A companion reader edited by the authors A History of Science in Society A Reader is also available *Proteins, Enzymes, Genes* , Defeated Flesh Bertrand Taithe, 1999 Defeated Flesh is a study of the French defeat of 1870 and the socialist uprising of the Commune of Paris Taithe considers how the French people mobilised for the war effort and how their ultimate defeat had social and cultural consequences **Creating Networks in Chemistry** Anita Kildebæk Nielsen, Soňa Štrbáňová, 2008 During the second half of the nineteenth century and the beginning of the twentieth century chemical societies were established all over Europe The book focuses on this process and further development of the European chemical societies before World War I and in exceptional cases up to 1930 It comprises chapters based on a common set of questions and an extensive concluding chapter that provides a comparative analysis of the early development of the European chemical societies The book offers unique historical material showing the social intellectual and political circumstances in which the chemical societies were constituted and function their relations to universities and chemical industries everyday lives international contacts etc The analysis of data explores how networks in chemistry and professional autonomy were constituted and investigates the process of demarcation that inevitably takes place when a social institution of a scientific discipline is formed The reader gets answer to the important question of what chemistry was and was not in the latter half of nineteenth century and the first decades of the twentieth century Various aspects of creating scientific societies have been of much interest to historians of science in recent years Nevertheless histories of scientific societies are mostly occasional publications written to celebrate their jubilees This volume represents a first international comparative

analysis on the beginnings of chemical societies in Europe based on a detailed historical research done by a group of renowned historians of chemistry from several countries As such it is an entirely new contribution to the history of chemistry in Europe and European scientific societies in general and a unique source for chemists and historians Its ambition is to become a reference work in history of chemistry set the standard for similar studies in other disciplines and serve European chemical societies to provide a context for their complex histories and relationships The book can be read by miscellaneous audiences and various types of readers with diverse intentions who will benefit differently from it A member of a national chemical society will find there narrative on his own society s establishment and early history and the opportunity to compare it with societies from other countries Historically interested chemists will find in the book details as well as wider perspectives on the institutional history of their discipline Historians of chemistry will get a thoroughly documented and scholarly book on the early history of chemical societies in Europe written by acknowledged colleagues The individual chapters will offer additional literature and sources for their research into history of chemistry Historians of science will get material for comparative studies on scientific institutions on the roles of learned societies on national and international level They can be inspired to create similar studies related to other scientific disciplines The underlying common set of guidelines can provide methodological assistance Teachers of history of chemistry and history of science will find in the book additional reading material and literature Social and general historians will be given a well edited and reliable source on a number of social institutions that played versatile roles in local national settings The establishment of chemical societies can be compared with other kinds of learned professional and amateur societies in the same period They also will get data and information about some aspects of the scientific boom in the second half of the nineteenth century and pre WW1 period

A History of Science in Society Andrew Ede, Lesley B. Cormack, 2012-01-01 This bestselling book traces the history of science through its continually changing place in society and explores the links between the pursuit of knowledge and the desire to make that knowledge useful

Green Chemistry Avant La Lettre: The Pine Institute And Resin Chemistry In Aquitaine (1900-1970) Marcin Krasnodebski, 2024-07-16 Long before the foundations of the concept of sustainability were laid down and green chemistry became a hot topic chemists had already been looking for alternative feedstocks hoping to liberate the industry from its dependency on fossil fuels This book examines one such story Near the largest French forest in the southwest of the country in Aquitaine a network of entrepreneurs of chemists established in the early 20th century the Pine Institute This curious institution working at the interface of academia and industry explored new uses for pine resin It is used to produce not only solvents glues and paper but also rocket fuels The pine resin has been one of the most versatile raw materials known to humanity This book not only explains the success of the material itself but also of the scientific industrial network that made it possible to exploit it sustainably over many decades Did the Pine Institute find a recipe for making the future more sustainable in the post oil world It carefully examines its organisational features relations with the local economy

as well as the core elements of resin chemistry as an independent discipline prefiguring sustainable chemistry of today This unique book constitutes an original and pioneering work on the origins of some of the ideas that are being labeled today as green or sustainable chemistry It establishes a bridge between two worlds explaining in detail the history of a sustainable scientific discipline in its institutional and economic setting accounting for the complexity of the relations between stakeholders and of the knowledge circulation patterns In other words the book fills a gap in the emerging field of social studies of scientific sustainability

A History of Light and Colour Measurement Sean F. Johnston, 2015-05-05 2003 Paul Bunge Prize of the Hans R Jenemann Foundation for the History of Scientific Instruments Judging the brightness and color of light has long been contentious Alternately described as impossible and routine it was beset by problems both technical and social How trustworthy could such measurements be Was the best standard of inten

A Master of Science History Jed Z. Buchwald, 2012-01-05 New essays in science history ranging across the entire field and related in most instance to the works of Charles Gillispie one of the field s founders

From Natural Philosophy to the Sciences David Cahan, 2003-09-15 During the 19th century much of the modern scientific enterprise took shape scientific disciplines were formed institutions and communities were founded and unprecedented applications to and interactions with other aspects of society and culture occurred taught us about this exciting time and identify issues that remain unexamined or require reconsideration They treat scientific disciplines biology physics chemistry the earth sciences mathematics and the social sciences in their specific intellectual and sociocultural contexts as well as the broader topics of science and medicine science and religion scientific institutions and communities and science technology and industry From Natural Philosophy to the Sciences should be valuable for historians of science but also of great interest to scholars of all aspects of 19th century life and culture

The Birth of Development Amy L. S. Staples, Amy L. Sayward, 2006 A comprehensive examination of economic globalization Focused on the creation and evolution of post 1945 internationalist ideology The Birth of Development highlights efforts to diffuse the destructive role of the nation state in world affairs by constructing truly international organizations with global agendas the World Bank the Food and Agriculture Organization and the World Health Organization These organizations and the men and women who worked for them pioneered the advancement of the quality of life for all and established an ongoing obligation to promote worldwide economic development As author Amy Staples reveals the results of their efforts were mixed Grounded in archival research conducted in the archives of the World Bank Food and Agriculture Organization and World Health Organization as well as in other archives in the United States Canada and Great Britain The Birth of Development provides a foundational understanding for many of today s debates on economic globalization especially those that involve the World Bank and World Trade Organization Given the current role of international peacekeepers and multinational aid agencies this story is timely and makes clear that the issues that confronted early postwar planners and reformers remain in many ways unsolved even today The Birth of Development is the only comparative study of these crucial architects of the

theory and practice of economic development and it contributes significantly to the ongoing effort to view the postwar period as more than simply an East West Cold War It breaks new ground conceptually and methodologically and will be a welcome addition to the literature in the fields of modern diplomatic history and international relations The Cambridge History of Science: Volume 8, Modern Science in National, Transnational, and Global Context Hugh Richard Slotten, Ronald L. Numbers, David N. Livingstone, 2020-04-09 This volume in the highly respected Cambridge History of Science series is devoted to exploring the history of modern science using national transnational and global frames of reference Organized by topic and culture its essays by distinguished scholars offer the most comprehensive and up to date nondisciplinary history of modern science currently available Essays are grouped together in separate sections that represent larger regions Europe Africa the Middle East South Asia East and Southeast Asia the United States Canada Australia New Zealand Oceania and Latin America Each of these regional groupings ends with a separate essay reflecting on the analysis in the preceding chapters Intended to provide a balanced and inclusive treatment of the modern world contributors analyze the history of science not only in local national and regional contexts but also with respect to the circulation of knowledge tools methods people and artifacts across national borders *The University at War, 1914-25* T. Irish, 2015-04-24 Drawing on examples from Britain France and the United States this book examines how scholars and scholarship found themselves mobilized to solve many problems created by modern warfare in World War I and the many consequences of this for higher education which have lasted almost a century **The Oxford Handbook of Philosophy of Science** Paul Humphreys, 2016-08-04 This handbook provides both an overview of state of the art scholarship in philosophy of science as well as a guide to new directions in the discipline Section I contains broad overviews of the main lines of research and the state of established knowledge in six principal areas of the discipline including computational physical biological psychological and social sciences as well as general philosophy of science Section II covers what are considered to be the traditional topics in the philosophy of science such as causation probability models ethics and values and explanation Section III identifies new areas of investigation that show promise of becoming important areas of research including the philosophy of astronomy and astrophysics data complexity theory neuroscience simulations post Kuhnian philosophy post empiricist epistemology and emergence Most chapters are accessible to scientifically educated non philosophers as well as to professional philosophers and the contributors all leading researchers in their field bring diverse perspectives from the North American European and Australasian research communities This volume is an essential resource for scholars and students Making Spirit Matter Larry Sommer McGrath, 2020-11-13 The connection between mind and brain has been one of the most persistent problems in modern Western thought even recent advances in neuroscience haven t been able to explain it satisfactorily Historian Larry Sommer McGrath s Making Spirit Matter studies how a particularly productive and influential group of nineteenth and early twentieth century French thinkers attempted to solve this puzzle by showing the mutual dependence of spirit and matter The

scientific revolution taking place at this point in history across disciplines from biology to psychology and neurology located our mental powers in the brain and offered a radical reformulation of the meaning of society spirit and the self Tracing connections among thinkers such as Henri Bergson Alfred Fouille and Jean Marie Guyau and others McGrath plots alternative intellectual movements that revived themes of creativity time and experience by applying the very sciences that seemed to undermine metaphysics and religion Making Spirit Matter lays out the long legacy of this moment in the history of ideas and how it might renew our understanding of the relationship between mind and brain today God's Eugenicist Andrés Horacio Reggiani, 2007 The temptations of a new genetically informed eugenics and of a revived faith based world wide political stance this study of the interaction of science religion politics and the culture of celebrity in twentieth century Europe and America offers a fascinating and important contribution to the history of this movement The author looks at the career of French born physician and Nobel Prize winner Alexis Carrel 1873 1944 as a way of understanding the popularization of eugenics through religious faith scientific expertise cultural despair and right wing politics in the 1930s and 1940s Carrel was among the most prestigious experimental surgeons of his time who also held deeply illiberal views In Man the Unknown 1935 he endorsed fascism and called for the elimination of the unfit The book became a huge international success largely thanks to its promotion by Readers Digest as well as by the author's friendship with Charles Lindbergh In 1941 he went into the service of the French pro German regime of Vichy which appointed him to head an institution of eugenics research His influence was remarkable affecting radical Islamic groups as well Le Pen's Front National that celebrated him as the founder of ecology Approaching Hysteria Mark S. Micale, 2019-01-15 What does this burgeoning corpus of writing tell us Why in recent years has the history of hysterical disorders carried such resonance for commentators in the sciences and humanities What can we learn from the textual traditions of hysteria about writing the history of disease in general What is the broader cultural meaning of the new hysteria studies In the second half of the book Micale discusses the many historical cultures of hysteria He reconstructs in detail the past usages of the hysteria concept as a powerful descriptive trope in various nonmedical domains including poetry fiction theater social thought political criticism and the arts His book is a pioneering attempt to write the historical phenomenology of disease in an age preoccupied with health and a prescriptive remedy for writing histories of disease in the future **Science, Vine and Wine in Modern France** Harry W. Paul, 2002-07-18 Science Vine and Wine in Modern France examines the role of science in the civilization of wine in modern France Viticulture the science of the vine itself and oenology the science of winemaking are its subjects Together they can boast of at least two major triumphs the creation of the post phylloxera vines that repopulated late nineteenth century vineyards devastated by the disease and the understanding of the complex structure of wine that eventually resulted in the development of the widespread wine models of Bordeaux Burgundy and Champagne This is the first analysis of the scientific battle over the best way to save the French vineyards and the first account of the growth of oenological science in France

since Chaptal and Pasteur **Professionalism, the Third Logic** Eliot Freidson, 2001-06 This new work explores the meaning and implications of professionalism as a form of social organization Eliot Freidson formalizes professionalism by treating it as an ideal type grounded in the political economy he presents the concept as a third logic or a more viable alternative to consumerism and bureaucracy He asks us to imagine a world where workers with specialized knowledge and the ability to provide society with especially important services can organize and control their own work without directives from management or the influence of free markets Freidson then appraises the present status of professionalism exploring how traditional and national variations in state policy and organization are influencing the power and practice of such professions as medicine and law Widespread attacks by neoclassical economists and populists he contends are obscuring the social value of credentialism and monopolies The institutions that sustain professionalism in our world are simply too useful to both capital and state to dismiss
