*Learning Science in the Schools* Shawn M. Glynn, Reinders Duit, 2012-10-12 Science and the technology derived from it is having a dramatic impact on the quality of our personal lives and the environment around us. Science will have an even greater impact on the lives of our students. The lives of scientifically literate students will be enriched by their understanding, appreciation, and enjoyment of the natural world. To prosper in the near future, all students must become scientifically literate and embrace the notion of life-long learning in science. Without scientific literacy, it will become impossible for students to make informed decisions about the interrelated educational, scientific, and social issues that will confront them in the future. Intended for science teachers, teacher educators, researchers, and administrators, this volume is concerned with the innovative research that is reforming how science is learned in schools. The chapters provide overviews of current research and illustrate how the findings of this research are being applied in schools. This research-based knowledge is essential for effective science instruction. The contributors are leading authorities in science education, and their chapters draw clear connections among research, theory, and classroom practice. They provide excellent examples from science classes in which their research has reformed practice. This book will help educators develop the scientific literacy of students. It bridges the gap between cutting-edge research and classroom practice to provide educators with the knowledge they need to foster students' scientific literacy.

**Handbook of Research on Teaching** Drew Gitomer, Courtney Bell, 2016-05-19 The Fifth Edition of the *Handbook of Research on Teaching* is an essential resource for students and scholars dedicated to the study of teaching and learning. This volume offers a vast array of topics ranging from the history of teaching to technological and literacy issues. In each authoritative chapter, the authors summarize the state of the field while providing conceptual overviews of critical topics related to research on teaching. Each of the volume's 23 chapters is a canonical piece that will serve as a reference tool for the field. The *Handbook* provides readers with an unparalleled view of the current state of research on teaching across its multiple facets and related fields.

*International Handbook of Semiotics* Peter Pericles Trifonas, 2015-05-11 This book provides an extensive overview and analysis of current work on semiotics that is being pursued globally in the areas of literature, the visual arts, cultural studies, media, the humanities, natural sciences, and social sciences. Semiotics, also known as structuralism, is one of the major theoretical movements of the 20th century, and its influence as a way to conduct analyses of cultural products and human practices has been immense. This is a comprehensive volume that brings together many otherwise fragmented academic disciplines and currents, uniting them in the framework of semiotics. Addressing a longstanding need, it provides a global perspective on recent and ongoing semiotic research across a broad range of disciplines. The handbook is intended for all researchers interested in applying semiotics as a critical lens for inquiry across diverse disciplines.

*Learning in Science* brings together accounts of the five influential and groundbreaking *Learning in Science* Projects undertaken by the author over a period of twenty years Offering comprehensive coverage of the findings and implications of the projects the book offers insight and inspiration at all levels of science teaching and learning from primary and secondary school science to teacher development and issues of classroom assessment The book reviews the findings in the light of current science education and is thematically organised to illuminate continuous and emerging themes and trends including learning pedagogy assessment Maori and science education curriculum development as teacher development and research methodology *Learning in Science* will be a valuable resource for science teachers science teacher educators science education researchers curriculum developers and policy makers *Teaching Science in Secondary Schools* Sandra Amos,Richard Boohan,2013-10-11

A companion to *Aspects of Teaching Secondary Science* the first section of this reader provides an overview of the key issues discussing the nature of science and its role in the school curriculum The second section goes on to examine critically the ways in which science is reflected in the school curriculum while the third section discusses recent curriculum initiatives and developments Turning the focus from what is taught on to who is taught section four shows that students are very much active learners in the classroom making sense of their experiences and constructing their own meanings The final section covers the role of research in science education giving examples of research papers and considering how productive collaboration between teachers and researchers can impact upon the effectiveness of classroom practice *Secondary Science* Jerry Wellington,2002-11-01

Science education has changed radically in recent years both as a result of debates within the subject and because of curriculum legislation Jerry Wellington discusses the major issues in science education today such questions as the balance of content and process in the curriculum the role of practical work and the nature of science as a subject and uses this discussion to support a very practical resource for teachers in training and their mentors The book covers every aspect of science teaching including Planning Differentiation and special needs Assessment Practical work Problem solving and investigations IT in science Handling sensitive issues e g sex education

Building on children's prior learning Throughout Wellington's guidance is accompanied by suggestions for discussion activities for individual and group use and annotated lists of further reading aimed at helping the reader to build up a personal approach to the teaching of the subject Students will also be helped by the glossaries of specialist terminology at the end of each chapter and by the references to National Curriculum attainment targets at every point in the book

**Children's Informal Ideas in Science** P. J. Black, A. M. Lucas, 2002-03-11 The ideas that children have about science concepts have for the past decade been the subject of a wealth of international research But while the area has been strong in terms of data it has suffered from a lack of theory Children's Informal Ideas in Science addresses the question of whether children's ideas about science can be explained in a single theoretical framework Twelve different approaches combine to tackle this central issue each taking a deliberately critical standpoint The contributors address such themes as values in research the social construction of knowledge and the work of Piaget in a rich contribution to the debate without claiming finally to resolve it The authors conclude with a discussion of how a theory can be built up along with suggestions for ways ahead in the research

**Reflective Teacher Development in Primary Science** Peter Ovens, 2005-08-10 Dominant theories about primary science contend that knowledge is the key Ovens challenges this view showing through case studies that inquiry and reflection play a significant part in the learning process This applies to pupils teachers and teacher educators Taking curiosity as a pre condition for good learning Ovens shows that it is possible to increase the desire to learn more and learn better to improve confidence in the ability to inquire to imbue pupils with the courage to seek improvement to place trust in collaborative processes to raise awareness of significant detail and to encourage open mindedness

**Teaching and Learning Secondary Science** Jerry Wellington, Gren Ireson, 2002-01-31 A comprehensive and critical guide for new and experienced teachers on the teaching and learning of science It combines an overview of current research with an account of curriculum changes to provide a valuable and practical guide to the business of classroom teaching

**Beyond Cartesian Dualism** Steve Alsop, 2006-02-15 There is surprisingly little known about affect in science education Despite periodic forays into monitoring students attitudes toward science the effect of affect is too often overlooked Beyond Cartesian Dualism gathers together contemporary theorizing in this axiomatic area In fourteen chapters senior scholars of international standing use their knowledge of the literature and empirical data to model the relationship between cognition and affect in science education Their revealing discussions are grounded in a broad range of educational contexts including school classrooms universities science centres travelling exhibits and refugee camps and explore an array of far reaching questions What is known about science teachers and students emotions How do emotions mediate and moderate instruction How might science education promote psychological

resilience How might educators engage affect as a way of challenging existing inequalities and practices This book will be an invaluable resource for anybody interested in science education research and more generally in research on teaching learning and affect It offers educators and researchers a challenge to recognize the mutually constitutive nature of cognition and affect
