The International Handbook of Educational Research in the Asia-Pacific Region J.P. Keeves, Ryo Watanabe, 2013-11-11 The aim of the Handbook is to present readily accessible but scholarly sources of information about educational research in the Asia Pacific region The scale and scope of the Handbook is

such that the articles included in it provide substantive contributions to knowledge and understanding of education in the Asia region. In so doing the articles present the problems and issues facing education in the region and the findings of research conducted within the region that contribute to the resolution of these problems and issues. Moreover, since new problems and issues are constantly arising, the articles in the Handbook also indicate the likely directions of future developments. The different articles within the Handbook seek to conceptualize the problems in each specific content area under review, provide an integration of the research conducted within that area, the theoretical basis of the research, the practical implications of the research, and the contribution of the research towards the resolution of the problems identified. Thus the articles do not involve the reporting of newly conducted research but rather require a synthesis of the research undertaken in a particular area with reference to the research methods employed and the theoretical frameworks on which the research is based. In general, the articles do not advocate a single point of view but rather present alternative points of view and comment on the debate and disagreements associated with the conduct and findings of the research. Furthermore, it should be noted that the Handbook is not concerned with research methodology and only considers the methods employed in inquiry in so far as the particular methods of research contribute to the effective investigation of problems and issues that have arisen in the conduct and provision of education at different levels within the region.

Computers in the Delivery of Special Education and Related Services Louis J. Kruger, 2001-02-27

Use computer technology to complement and strengthen your special education program. This book provides practical information, case examples, theory, and a critical summary of applied research about how computer technology can be used to support and improve special education and related services. With *Computers in the Delivery of Special Education and Related Services*, you will learn how technology can be used to facilitate an individualized and collaborative approach to learning. Topics of discussion include innovative instruction, consultation, family collaboration, curriculum-based assessment, and professional development. *Computers in the Delivery of Special Education and Related Services* is a valuable resource in which special services providers can find ways to use computers to enhance individualized instruction and the problem-solving skills of their students, as well as avenues of professional collaboration and support. *Computers in the Delivery of Special Education and Related Services* presents thoughtful discussions that examine how computer software can be used in the assessment of students' progress within specific curricula, how students can use the Internet to discuss class projects with experts in a process known as telementoring, how software can help a school-based consultation team through specific aspects of the problem-solving process, including data collection, intervention selection, team decision documentation, and follow-up ways to use the Internet to create new types of learning communities for students and professionals, extending Vygotsky's notion of zone of proximal development (ZPD) to the community level, the advantages and disadvantages of using email with the intention of complementing and strengthening face-to-face collaboration, the aspects of home computer use that address a student's

special needs the importance of understanding the family's values, expectations and cultural background. Computers in the Delivery of Special Education and Related Services reflects the editors' hope that creative applications of technology will soon transcend the nagging stereotypes of computers: they isolate students, they're too difficult to use, that they lack the flexibility to treat people as individuals. Then computers will be viewed as partners in the process of special education: machines that enhance current practices and open new vistas for learning and education.

Cumulated Index Medicus, 1998 **Web-Based Control and Robotics Education** Spyros G. Tzafestas, 2009-07-31 For the things we have to learn before we can do them, we learn by doing them. Aristotle. Teaching should be such that what is offered is perceived as a valuable gift and not as a hard duty. Albert Einstein. The second most important job in the world, second only to being a good parent, is being a good teacher. S. G. Ellis. The fast technological changes and the resulting shifts of market conditions require the development and use of educational methodologies and opportunities with moderate economic demands. Currently, there is an increasing number of educational institutes that respond to this challenge through the creation and adoption of distance education programs in which the teachers and students are separated by physical distance. It has been verified in many cases that with the proper methods and tools, teaching and learning at a distance can be as effective as traditional face-to-face instruction. Today, distance education is primarily performed through the Internet, which is the biggest and most powerful computer network of the World and the World Wide Web (WWW), which is an effective front end to the Internet and allows the Internet users to uniformly access a large repertory of resources: text, data, images, sound, video, etc., available on the Internet.
