Education And Training:

Education, Training, and Development in Organisation Karen Jerling, 1996 *Learning to Work* W. Norton Grubb, 1996-05-30

Grubb's powerful vision of a workforce development system connected by vertical ladders for upward mobility adds an important new dimension to our continued efforts at system reform. The unfortunate reality is that neither our first chance education system nor our second chance job training system have succeeded in creating clear pathways out of poverty for many of our citizens. Grubb's message deserves a serious hearing by policy makers and practitioners alike.

Evelyn Ganzglass National Governors Association

Over the past three decades job training programs have proliferated in response to mounting problems of unemployment, poverty, and expanding welfare rolls. These programs and the institutions that administer them have grown to a number and complexity that make it increasingly difficult for policymakers to interpret their effectiveness. Learning to Work offers a comprehensive assessment of efforts to move individuals into the workforce and explains why their success has been limited. Learning to Work offers a complete history of job training in the United States beginning with the Department of Labor's manpower development programs in the 1960s and detailing the expansion of services through the Comprehensive Employment and Training Act in the 1970s and the Job Training Partnership Act in the 1980s. Other programs have sprung from the welfare system or were designed to meet the needs of various state and corporate development initiatives. The result is a complex mosaic of welfare-to-work, second chance training, and experimental programs, all with their own goals, methodology, institutional administration, and funding. Learning to Work examines the findings of the most recent and sophisticated job training evaluations and what they reveal for each type of program. Which agendas prove most effective? Do their effects last over time? How well do programs benefit various populations: from welfare recipients to youths to displaced employees in need of retraining? The results are not encouraging. Many programs increase employment and reduce welfare dependence but by meager increments, and the results are often temporary. On average, most programs boosted earnings by only 200 to 500 per year, and even these small effects tended to decay after four or five years. Overall, job training programs moved very few individuals permanently off welfare and provided no entry into a middle class occupation or income. Learning to Work provides possible explanations for these poor results, citing the limited scope of individual programs, their lack of linkages to other programs or job-related opportunities, the absence of academic content or solid instructional methods, and their vulnerability to local political interference. Author Norton Grubb traces the root of these problems to the inherent separation of job training programs from the more successful educational system. He proposes consolidating the two domains into a clearly defined hierarchy of programs that combine school and work-based instruction and employ proven methods of student-centered, project-based teaching. By linking programs tailored to every level of need and replacing short-term job training with long-term education, a system could be created to enable individuals to achieve increasing levels of economic success. The problems that job training programs address are too serious to ignore. Learning

to Work tells us what's wrong with job training today and offers a practical vision for reform Education and Training Great Britain. Central Electricity Generating Board. Education and Training Branch, 1961

Workplace Perspectives on Education and Training Peter Doeringer, 1981-03-31 Peter B Doeringer Many of our approaches to education and training date back to the nineteenth and early twentieth centuries Since that time the skills and abilities demanded by the economy have undergone far greater change than have our training arrangements Moreover our ambitions for what can be accomplished through education and training policy have also increased Not only do we expect that such policies should meet the skill needs of the nation but also we ask that they play a role in equalizing economic opportunity and in promoting greater well being among workers In accordance with its mandate to increase understanding of educational processes and educational policy the National Institute of Education NIE sponsored a two day workshop in June of 1979 to examine workplace perspectives on education and training policy The workshop brought together a group of employer and trade union representatives education and training specialists policy analysts and government officials to discuss research and policy questions raised by training activities at the workplace As one might expect the discussion ranged widely and reflected many viewpoints on the relationship between education and work Among the participants there was consensus neither as to what should be done nor 2 PETER B DOERINGER even as to what were the most important gaps in our knowledge about the workings of the education and training system
