The Developing Child with Unilateral Hearing Loss Karen L. Anderson, 2013-02-25 This step by step guide has been developed to share with families after unilateral hearing loss has been diagnosed typically in infancy secondary to identification through newborn hearing screening The guide reviews background information regarding what is known about the effects of hearing loss in one ear on child development It is divided into suggested sections to correspond with pediatric audiology appointments and with home visits by an early interventionist teacher of the deaf hard of hearing or speech language pathologist In some areas it will be the diagnosing audiologist who will share the majority of information on the developmental impact of unilateral hearing loss with parents In other areas it will be the role of the early intervention provider This guide has provided step by step guidance to support both models The use of different materials is specified per session however each family may absorb information more quickly or slowly than suggested The teacher clinician must adjust the rate of presentation of the material to best meet the needs of the family members The format has been designed specifically for use during discussions with families to facilitate providing important information to families to aid them in their choices as well as answering their questions as appropriate to their readiness This material consists of 1 Step by step guidance for sessions with families 2 Specific handouts to provide during each session contained in Section 7 3 PDF file of a 100 slide PowerPoint presentation 4 Additional materials for families There are 25 downloadable files included with this guide

Achieving Effective Hearing Aid Use in Early Childhood Karen L. Anderson, 2013-08-08 The combination of early identification of hearing loss and vastly improved hearing technology has resulted in the promise of better language school and lifelong outcomes for children with hearing loss Yet those outcomes will not be realized unless the child's hearing is enhanced by consistent use of hearing devices to allow the best possible perception of speech Simply identifying the hearing loss early and providing hearing aids to families will do little to improve lifelong learning Research has indicated that only 10% of children achieve full time hearing aid use during all waking hours The families of these children need to understand the importance of consistent hearing for brain development But knowing how important hearing is to growing a child's brain is still not enough Fitting hearing aids to meet the hearing needs of an infant or toddler is only the first step It takes much patience persistence love and understanding by the child's family to reach the goal of full time hearing aid wear As the child moves through developmental stages toward becoming an independent person his or her complacency with hearing aid wear is very likely to change This does not mean that the child is rejecting the hearing aids because he does not like them It means that he or she is learning

new skills towards body control and independence The purpose of this guide is to further understanding of child development how it will affect hearing aid wear and what families and early intervention teachers can do to achieve full time hearing aid wear By using the information in this guide hearing aid retention accessories and specific age appropriate strategies it is hoped that families will be better prepared to manage their child s hearing aid wear Purchase from <http://successforkidswithhearingloss.com> achieving effective hearing aid use in early childhood
