analysis and critique of the Doman Delacato approach The author draws on data from evolution neuroanatomy and neurophysiology to challenge its theoretical assumptions He shows that there is no sound scientific basis to the techniques Any improvements in a child s condition can be attributed to the increased energy and attention given to that child rather than the content of the programme At the same time parents become emotionally ransomed and deluded by false expectations Written in a style that will be accessible to non specialists the book is an important work for both parents and professionals concerned with the welfare of neurologically impaired children **Current Catalog** ,1965 First multi year cumulation covers six years 1965 70
