Gossypol A Potential Contraceptive For Men:

Gossypol Sheldon J. Segal, 2012-12-06 The search for a reversible male contraceptive has centered upon the suppression of sperm production or sperm motility *Gossypol* a natural substance extracted from the cotton plant appears to cause both of these effects Its ability to reduce spermatogenesis in men is undeniable and has been demonstrated in both large studies in China and a smaller confirmatory study in Brazil These investigations have revealed the remarkable fact that with *gossypol* it is possible to separate an effect on the testis gamete producing function from an effect on its hormone producing function Thus it is possible to maintain normal testosterone levels and libido while sperm counts and motility fall Because of this unique and important action *gossypol* warrants the fullest possible evaluation as a potential male contraceptive Sheldon J Segal vii ACKNOWLEDGMENT Lynn C Landman played a major role in this publication by skillfully editing the manuscripts which were submitted for inclusion in this volume Janet O Connell added her efforts in editing assembling texts and figures and handling final details required for publication I thank these talented colleagues for their invaluable contributions

Anti-fertility Plants of the Pacific R. C. Cambie, Alexandra Brewis, 1997 Documents information on plants used traditionally for anti fertility and fertility purposes in the Pacific *Knobil and Neill's Physiology of Reproduction* Tony M. Plant, Anthony J. Zeleznik, 2014-11-15 The Fourth Edition of *Knobil Neill* continues to serve as a reference aid for research to provide the historical context to current research and most importantly as an aid for graduate teaching on a broad range of topics in human and comparative reproduction In the decade since the publication of the last edition the study of reproductive physiology has undergone monumental changes Chief among these advances are in the areas of stem cell development signaling pathways the role of inflammation in the regulatory processes in the various tissues and the integration of new animal models which have led to a greater understanding of human disease The new edition synthesizes all of this new information at the molecular cellular and organismal levels of organization and present modern physiology a more understandable and comparative context The Fourth Edition has been extensively revised reflecting new fundamental advancements in this rapidly advancing field Provides a common language for researchers across the fields of physiology endocrinology and biology to discuss their understanding of reproduction Saves academic researchers time in quickly accessing the very latest details on reproductive physiology as opposed to searching through thousands of journal articles

Handbook of Toxinology W. T. Shier, 2020-08-26 Organized primarily around the mechanisms of action of the toxins at the biochemical physiological and pathological level rather than by source the handbook covers most toxins which have been clearly identified and characterized but emphasizes toxins that are more important by virtue of the sign *Current Therapy in Large Animal Theriogenology* Robert S. Youngquist, Walter R. Threlfall, 2006-10-10 An essential resource for both students and practitioners this comprehensive text provides practical up to date information about normal reproduction and reproductive disorders in horses cattle small ruminants swine llamas and other livestock Featuring contributions from

experts in the field each section is devoted to a different large animal species and begins with a review of the clinically relevant aspects of the reproductive anatomy and physiology of both males and females. Key topics include the evaluation of breeding soundness, pregnancy diagnosis, diagnosis and treatment of infertility, abortion, obstetrics, surgery of the reproductive tract, care of neonates and the latest reproductive technology. Includes coverage of all large animal species. All sections provide a review of clinically pertinent reproductive physiology and anatomy of males and females of each species. Complete coverage of the most current reproductive technology including embryo transfer, estrous synchronization and artificial insemination. A new section on alternative farming that addresses reproduction in bison, elk and deer. New to the equine section: stallion management, infertility and breeding soundness evaluation. New to the bovine section: estrous cycle synchronization, reproductive biotechnology, ultrasonographic determination of fetal gender, heifer development and diagnosis of abortion. Handbook of Plant and Fungal Toxicants J. P. Felix D'Mello, 2020-03-27 First published in 1997. Natural toxicants are the subject of research throughout the world and they are used for many purposes. The Handbook of Plant and Fungal Toxicants presents a wide range of compounds and considers how they relate to food safety, therapeutic purposes in medicine and uses in breeding plants for enhanced resistance to insects and disease. Alkaloids, both from plant and fungal sources, are emphasized. Also covered are a variety of toxicants and phytochemicals including bracken fern poisons, polyphenolics, gossypol, flavones, isoflavones, pyrimidine glycosides, fruit and vegetable allergens, linear furanocoumarins, photosensitizing agents, nitrates, oxalates, *Pinus ponderosa* toxicants. The text stresses the positive aspects of plant secondary compounds and presents examples of beneficial attributes in the context of environmental protection and human health. An international authorship addresses the global diversity and ecological distribution of plant and fungal toxicants. This handbook is ideal for senior level college students and post graduate students studying animal science, toxicology and pharmaceutical sciences.

Female Contraception and Male Fertility Regulation Benno Runnebaum, Thomas Rabe, L. Kiesel, 1991

Spermatogenesis — Fertilization — Contraception S. Nieschlag, E. Nieschlag, Ursula-F. Habenicht, 2013-04-17. Investigations into the mechanisms of spermatogenesis, sperm maturation and fertilization provide the basis of our understanding of male reproductive physiology. Since in recent years molecular and cellular endocrinology has provided particularly important contributions to our knowledge, the European Workshops on Molecular and Cellular Endocrinology of the Testis, held regularly during even years since 1980, have become a prominent forum for researchers in the field to discuss recent findings and exchange new ideas. The most recent of these Testis Workshops, the 7th, was held on May 5-10, 1992, at Castle Elmau in the Bavarian Alps. The main lectures of this Workshop form the core of this book. In order to provide a broader view of the current status of male reproduction research, this volume also contains the proceedings of the Schering Foundation Workshop on Basic Mechanisms

of Reproduction and Male Fertility Control which was held in Berlin on October 31 to November 2 1991 The topics of the two meetings were planned to complement each other By combining the proceedings of both workshops it became possible to produce a book that covers a wide spectrum of current highlights in male reproduction research and provides the reader with an up to date review of the field The timeliness of the book is emphasized by the fact that it was already available when the 7th European Testis Workshop took place

Knobil and Neill's Physiology of Reproduction, 2005-12-12 The 3rd edition the first new one in ten years includes coverage of molecular levels of detail arising from the last decade's explosion of information at this level of organismic organization There are 5 new Associate Editors and about 2/3 of the chapters have new authors Chapters prepared by return authors are extensively revised Several new chapters have been added on the topic of pregnancy reflecting the vigorous investigation of this topic during the last decade The information covered includes both human and experimental animals basic principles are sought and information at the organismic and molecular levels are presented The leading comprehensive work on the physiology of reproduction Edited and authored by the world's leading scientists in the field Is a synthesis of the molecular cellular and organismic levels of organization Bibliographies of chapters are extensive and cover all the relevant literature
