world The events that precipitated that historic announcement included a series of terrorist attacks during the 1990s which culminated in the catastrophic events of 2001 Although preparedness for deliberate attacks with biologic weapons was already the subject of much public health planning meetings and publications as the twentieth century neared its end the events of 2001 led to a steep rise in bioterrorism related government policies and funding and in state and local preparedness activities for example in public health health care and the emergency response and public safety communities The national smallpox vaccination program is but one of many efforts to improve readiness to respond to deliberate releases of biologic agents The Institute of Medicine IOM Committee on Smallpox Vaccination Program Implementation was convened in October 2002 at the request of the Centers for Disease Control and Prevention CDC the federal agency charged with implementing the government s policy of providing smallpox vaccine first to public health and health care workers on response teams then to all interested health care workers and other first responders and finally to members of the general public who might insist on receiving the vaccine The committee was charged with providing advice to the CDC and the program investigators on selected aspects of the smallpox program implementation and evaluation The committee met six times over 19 months and wrote a series of brief letter reports The Smallpox Vaccination Program Public Health in an Age of Terrorism constitutes the committee s seventh and final report and the committee hopes that it will fulfill three purposes 1 To serve as an archival document that brings together the six reports addressed to Julie Gerberding director of CDC and previously released on line and as short unbound papers 2 To serve as a historical document that summarizes milestones in the smallpox vaccination program and 3 To comment on the achievement of overall goals of the smallpox vaccination program in accordance with the last item in the charge including lessons learned from the program Vaccine Science and Immunization Guideline Pamela G. Rockwell, DO, 2017-11-03 This book is a comprehensive resource on vaccines and immunizations for primary care physicians advanced practice providers and trainees We are now seeing a rise in measles and the potential for rises in other previously rare infectious diseases significantly due to public and physician misconceptions and misinformation about vaccines The text addresses this issue by consolidating historical and current advances in vaccine science from how vaccines are developed to CDC recommendations on how and when to administer them Expert authors also address barriers to improving vaccination rates in the U S and offer evidence based recommendations on overcoming those barriers This is an essential guide for primary care physicians family physicians pediatricians internists residents medical students mid level providers and learners for understanding vaccines and improving preventative care for their patients

Smallpox, Syphilis and Salvation Sheryl Persson, 2010-04 Since ancient times the search for cures for the great scourges that have afflicted humankind has been an ongoing quest but it is only within the last 200 years that major breakthroughs have occurred and the development of modern medicine has accelerated The stories behind these miraculous cures are those of intense rivalries and jealousies bitter public humiliation unswerving dedication subterfuge and great personal struggles

Often these medical advances have truly changed the world When Edward Jenner developed the concept of vaccination and with it the cure for smallpox he found a way to defeat a disease that had affected half a billion people more than all those affected by wars and other epidemics combined And while the Black Death still lingers in pockets around the world it no longer threatens to destroy entire civilisations as it once did SMALLPOX SYPHILIS AND SALVATION uncovers the compelling stories of the men and women innovations and accidents that have led to diseases from polio to syphilis diphtheria to diabetes tetanus to leukaemia no longer being the death sentences they once were It also sounds a note of warning for some of these diseases are fighting back It is estimated that tuberculosis now claims one life every fifteen seconds while new superbugs are resistant to penicillin and other antibiotics Diseases may once again threaten to crush the world's population either in the form of biological warfare or simply because they want to survive as much as we do
