Energy Efficient Computation Offloading in Mobile Edge Computing Ying Chen, Ning Zhang, Yuan Wu, Sherman Shen, 2022-10-30 This book provides a comprehensive review and in depth discussion of the state of the art research literature and propose energy efficient computation offloading and resources management for mobile edge computing MEC covering task offloading channel allocation frequency scaling and resource scheduling Since the task arrival process and channel conditions are stochastic and dynamic the authors first propose an energy efficient dynamic computing offloading scheme to minimize energy consumption and guarantee end devices delay performance To further improve energy efficiency combined with tail energy the authors present a computation offloading and frequency scaling scheme to jointly deal with the stochastic task allocation and CPU cycle frequency scaling for minimal energy consumption while guaranteeing the system stability They also investigate delay aware and energy efficient computation offloading in a dynamic MEC system with multiple edge servers and introduce an end to end deep reinforcement learning DRL approach to select the best edge server for offloading and allocate the optimal computational resource such that the expected long term utility is maximized Finally the authors study the multi task computation offloading in multi access MEC via non orthogonal multiple access NOMA and accounting for the time varying channel conditions An online algorithm based on DRL is proposed to efficiently learn the near

optimal offloading solutions Researchers working in mobile edge computing task offloading and resource management as well as advanced level students in electrical and computer engineering telecommunications computer science or other related disciplines will find this book useful as a reference Professionals working within these related fields will also benefit from this book
