Plastics Failure Analysis and Prevention John Moalli, 2001-12-31 This book contains analysis of reasons that cause products to fail General methods of product failure evaluation give powerful tools in product improvement Such methods discussed in the book include practical risk analysis failure mode and effect analysis preliminary hazard analysis progressive failure analysis fault tree analysis mean time between failures Wohler curves finite element analysis cohesive zone model crack propagation kinetics time temperature collectives quantitative characterization of fatigue damage and fracture maps Methods of failure analysis are critical to for material improvement and they are broadly discussed in this book Fractography of plastics is relatively a new field which has many commonalities with fractography of metals Here various aspects of fractography of plastics and metals are compared and contrasted Fractography application in studies of static and cycling loading of ABS is also discussed Other methods include SEM SAXS FTIR DSC DMA GC MS optical microscopy fatigue behavior multiaxial stress residual stress analysis punch resistance creep rupture impact oxidative induction time craze testing defect analysis fracture toughness activation energy of degradation Many references are given in this book to real products and real cases of their failure The products discussed include office equipment automotive compressed fuel gas system pipes polymer blends blow molded parts layered cross ply and continuous fiber composites printed circuits electronic packages hip implants blown and multilayered films construction materials component housings brake cups composite pressure vessels swamp coolers electrical cables plumbing fittings medical devices medical packaging strapping tapes balloons marine coatings thermal switches pressure relief membranes pharmaceutical products window profiles and bone cements *U.S. Government Research Reports* ,1964 **Carraher's Polymer Chemistry, Eighth Edition** Charles E. Carraher Jr., 2010-10-13 Updated to reflect a growing focus on green chemistry in the scientific community and in compliance with the American Chemical Society's Committee on Professional Training guidelines Carraher's Polymer Chemistry Eighth Edition integrates the core areas that contribute to the growth of polymer science It supplies the basic understanding of polymers essential to the training of science biomedical and engineering students New in the Eighth Edition Updating of analytical physical and special characterization techniques Increased emphasis on carbon nanotubes tapes and glues butyl rubber polystyrene polypropylene polyethylene poly ethylene glycols shear thickening fluids photo chemistry and photophysics dental materials and aramids New sections on copolymers including fluoroelastomers nitrile rubbers acrylonitrile butadiene styrene terpolymers and EPDM rubber New units on splicosomes asphalt and fly ash and aluminosilicates Larger focus on the molecular behavior of materials including nano scale behavior nanotechnology and nanomaterials Continuing to provide a user friendly approach to the world of polymeric materials the book allows students to integrate their chemical knowledge and establish a connection between fundamental and applied chemical information It contains all of the elements of an introductory text with synthesis property application and characterization Special sections

in each chapter contain definitions learning objectives questions and additional reading with case studies woven into the text fabric Symbols trade names websites and other useful ancillaries appear in the appendices to supplement the text
