The Lion's Historian Sandra Swart,2025-05-06 Until the lion has a historian of his own the tale of the hunt will always glorify the hunter Sandra Swart takes up the challenge of that African proverb and with this book becomes the lion's historian As a species humans are not alone but our history has been written as though we were Swart insists on a multispecies retelling of our more than human past as she reconstructs a shifting series of significant interspecies relationships from quirky idiosyncratic connections to others that triggered major changes Embracing a radical interdisciplinarity informed by a background in history and environmental studies Swart combines the natural sciences with the social sciences oral history indigenous knowledge and archival research She blends current thinking about animal sentience agency cognition and emotion to offer a new way to understand animals roles in our shared history The animals in this book baboons cows elephants hippos horses jackals lions Nazi cattle okapi police dogs quagga sheep and white ants exemplify different facets of our shared past With this animal centric lens decades of research come together in a collection that takes animals seriously It is a book with claws and fangs tearing through conventional narratives to ask Are we prepared to move beyond the convention that history is the story of only our own species The Kew Record of Taxonomic Literature Royal Botanic Gardens, Kew,1971 **Moonbird** Phillip Hoose,2012-07-17 Documents the survival tale of an intrepid shorebird who has endured annual migrations between Argentina and the Canadian Arctic throughout the course of a long lifetime while his species continues to decline Human-Environment Interactions Mark R. Welford,Robert A. Yarbrough,2020-10-06 This textbook explores the growing area of human environment interaction We live in the Anthropocene an era dominated by humans but also by the positive yet destructive environmental feedbacks that are poised to completely reset the relationships between nature and society Modern and historic political social and cultural processes and physical landscape responses determine the intensity of these impacts Yet different cultural groups political and economic entities view react to and impact these human environmental processes in spatially distinct and divergent ways Providing an accessible up to date approach to human environment interactions with balanced coverage of both social and natural science approaches to core environmental issues this textbook is an integrative multi disciplinary offering that discusses environmental issues and processes within the context of human societies The book begins by addressing the three most pressing issues of our time climate change threshold exceedance and the 6th mass extinction From there the authors identify within chapters on resources population agriculture and urbanization what precipitated and continues to sustain these three issues They end with a chapter outlining some practical solutions to our human environment crises The book will be a valuable resource for interdisciplinary environment related courses bridging the gap between the social and natural

sciences human geographies and physical geographies **Cultural Science** John Hartley, Jason Potts, 2014-09-25 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com Cultural Science introduces a new way of thinking about culture Adopting an evolutionary and systems approach the authors argue that culture is the population wide source of newness and innovation it faces the future not the past Its chief characteristic is the formation of groups or demes organised and productive subpopulation demes Demes are the means for creating distributing and growing knowledge However such groups are competitive and knowledge systems are adversarial Starting from a rereading of Darwinian evolutionary theory the book utilises multidisciplinary resources Raymond Williams s culture is ordinary approach evolutionary science e g Mark Pagel and Herbert Gintis semiotics Yuri Lotman and economic theory from Schumpeter to McCloskey Successive chapters argue that Culture and knowledge need to be understood from an externalist linked brains perspective rather than through the lens of individual behaviour Demes are created by culture especially storytelling which in turn constitutes both politics and economics The clash of systems including demes is productive of newness meaningfulness and successful reproduction of culture Contemporary urban culture and citizenship can best be explained by investigating how culture is used and how newness and innovation emerge from unstable and contested boundaries between different meaning systems The evolution of culture is a process of technologically enabled demic concentration of knowledge across overlapping meaning systems or semiospheres a process where the number of demes accessible to any individual has increased at an accelerating rate resulting in new problems of scale and coordination for cultural science to address The book argues for interdisciplinary consilience linking evolutionary and complexity theory in the natural sciences economics and anthropology in the social sciences and cultural communication and media studies in the humanities and creative arts It describes what is needed for a new modern synthesis for the cultural sciences It combines analytical and historical methods to provide a framework for a general reconceptualisation of the theory of culture one that is focused not on its political or customary aspects but rather its evolutionary significance as a generator of newness and innovation **The Kew Record of Taxonomic Literature Relating to Vascular Plants for ...** ,1977 **Passing**

elsewhere In this book Russell Powell investigates whether we can use the patterns and processes of convergent evolution to make inferences about universal laws of life on Earth and elsewhere Weaving together disparate philosophical and empirical threads Powell offers the first detailed analysis of the interplay between contingency and convergence in macroevolution as it relates to both complex life in general and cognitively complex life in particular If the evolution of mind is not a historical accident the product of convergence rather than contingency then Powell asks is mind likely to be an evolutionarily important feature of any living world Stephen Jay Gould argued for the primacy of contingency in evolution Gould's radical contingency thesis RCT has been challenged but critics have largely failed to engage with its core claims and theoretical commitments Powell fills this gap He first examines convergent regularities at both temporal and phylogenetic depths finding evidence that both vindicates and rebuffs Gould's argument for contingency Powell follows this partial defense of the RCT with a substantive critique Among the evolutionary outcomes that might defy the RCT he argues cognition is particularly important not only for human specific issues of the evolution of intelligence and consciousness but also for the large scale ecological organization of macroscopic living worlds Turning his attention to complex cognitive life Powell considers what patterns of cognitive convergence tell us about the nature of mind its evolution and its place in the universe If complex bodies are common in the universe might complex minds be common as well

does it matter Who cares With this concise accessible and up to date book Charles J Krebs answers critics and enlightens students and environmental advocates alike revealing not why phenomena like these deserve our attention but why they demand it Highlighting key principles in ecology from species extinction to the sun s role in powering ecosystems each chapter introduces a general question illustrates that question with real world examples and links it to pressing ecological issues in which humans play a central role such as the spread of invasive species climate change overfishing and biodiversity conservation While other introductions to ecology are rooted in complex theory math or practice and relegate discussions of human environmental impacts and their societal implications to sidebars and appendices Why Ecology Matters interweaves these important discussions throughout It is a book rooted in our contemporary world delving into ecological issues that are perennial timeless but could not be more timely
