Extinction Of Species:

Extinction Paul R. Ehrlich, Anne H. Ehrlich, 1983 Extinct Animals Ross Piper, 2009-03-20 Everyone is familiar with the dodo and the woolly mammoth but how many people have heard of the scimitar cat and the Falkland Island fox Extinct Animals portrays over 60 remarkable animals that have been lost forever during the relatively recent geological past Each entry provides a concise discussion of the history of the animal how and where it lived and how it became extinct as well as the scientific discovery and analysis of the creature In addition this work examines what led to extinction from the role of cyclical swings in the Earth's climate to the spread of humans and their activities Many scientists believe that we are in the middle of a mass extinction right now caused by the human undermining of the earth's complex systems that support life Understanding what caused the extinction of animals in the past may help us understand and prevent the extinction of species in the future Extinct Animals examines the biology and history of some of the most interesting creatures that have ever lived including The American Terror Bird which probably became extinct over 1 million years ago who were massive predators some of which were almost 10 feet tall the Rocky Mountain Locust last seen in 1902 formed the most immense animal aggregations ever known with swarms estimated to include over 10 trillion insects the Giant Ground Sloth which was as large as an elephant and the Neandertals the first Europeans which co-existed with prehistoric Homo sapiens Extinct Animals includes illustrations many created for the work that help the reader visualize the extinct creature and each entry concludes with a list of resources for those who wish to do further research **Extinction** P. B. Wignall, 2019 Extinction has occurred throughout the history of life and nearly all the species that have ever existed have now disappeared In this Very Short Introduction Paul B Wignall looks at the causes and nature of extinction events what makes a species vulnerable and the debates in modern science of the role of climate and humans *Imagining Extinction* Ursula K. Heise, 2016-08-10 We are currently facing the sixth mass extinction of species in the history of life on Earth biologists claim the first one caused by humans Heise argues that understanding these stories and symbols is indispensable for any effective advocacy on behalf of endangered species More than that she shows how biodiversity conservation even and especially in its scientific and legal dimensions is shaped by cultural assumptions about what is valuable in nature and what is not **Dying Planet** Jon Erickson, 1991 What we need to know on a personal and societal level to reverse current trends for our planet

De-Extinction Rebecca E. Hirsch, 2017-01-01 In the twenty first century because of climate change and other human activities many animal species have become extinct and many others are at risk of extinction Once they are gone we cannot bring them back or can we With techniques such as cloning scientists want to reverse extinction and return lost species to the wild Some scientists want to create clones of recently extinct animals while others want to make new hybrid animals Many people are opposed to de-extinction Some critics say that the work diverts attention from efforts to save species that are endangered Others say that de-extinction amounts to scientists playing God Explore the pros and cons of de-extinction

and the cutting edge science that makes it possible The Sixth Extinction Elizabeth Kolbert, 2014-02-11 Draws on the work of geologists botanists marine biologists and other researchers to discuss the five devastating mass extinctions on Earth and predicts the coming of a sixth Saving a Million Species Lee Hannah, 2012-06-22 The research paper Extinction Risk from Climate Change published in the journal Nature in January 2004 created front page headlines around the world The notion that climate change could drive more than a million species to extinction captured both the popular imagination and the attention of policy makers and provoked an unprecedented round of scientific critique Saving a Million Species reconsiders the central question of that paper How many species may perish as a result of climate change and associated threats Leaders from a range of disciplines synthesize the literature refine the original estimates and elaborate the conservation and policy implications The book examines the initial extinction risk estimates of the original paper subsequent critiques and the media and policy impact of this unique study presents evidence of extinctions from climate change from different time frames in the past explores extinctions documented in the contemporary record sets forth new risk estimates for future climate change considers the conservation and policy implications of the estimates Saving a Million Species offers a clear explanation of the science behind the headline grabbing estimates for conservationists researchers teachers students and policy makers It is a critical resource for helping those working to conserve biodiversity take on the rapidly advancing and evolving global stressor of climate change the most important issue in conservation biology today and the one for which we are least prepared **Watching, from the Edge of Extinction** Beverly Peterson Stearns, Stephen C. Stearns, 2000-01-01 Annotation In this mesmerizing series of interviews with dedicated people who work to save endangered species throughout the world an alarming truth emerges the obstacles of human politics greed corruption folly and hypocrisy can present as much danger to a species survival as biological causes The dramatic lessons of this book shed new light on the problems of declining species and offer hope that we may yet change their fate **Around the World in 80 Species** Jill Atkins, Barry Atkins, 2018-11-08 The world is currently experiencing a sixth period of mass species extinction and extinction of flora and fauna is caused by a variety of factors arising from industrial activity and increasing human population such as global warming climate change habitat loss pollution and use of pesticides Most causes of extinction are linked to corporate activity either directly or indirectly Around the World in 80 Species Exploring the Business of Extinction responds to the ongoing mass extinction crisis engulfing our planet by exploring the ways in which accounting business and finance can be used to prevent species extinctions From Africa to the Far East and from Europe to the Americas the authors explore species loss and how businesses can stop mass extinctions through greater transparency and through closer engagement with their investors and wildlife organisations The book concludes that global capitalism has led us to this extinction crisis and that therefore the mechanisms of capitalism namely accounting finance investment can help to pull us out Businesses must urgently address extinction before it is too late for all species including ourselves As the first book to explore corporate
