**Fibre & Fabric**, 1927 **Nonblocking Electronic and Photonic Switching Fabrics** Wojciech Kabacinski, 2005-12-06 Switching fabrics first appeared in telephone exchanges where there was a need to interconnect many pairs of telephones installed in the network Due to the large number of connected subscribers and int exchange links switching fabrics in telephone exchanges have to serve a great number of input and output ports Because of the scale large switching fabrics were constructed from smaller ones The way of building switching fabrics from elements of smaller capacity and different characteristics of switching fabrics topologies has been for a long time a rich area of theoretical research The seminal work is due to C Clos 23 who first considered multistage strict sense nonblocking switching networks and V E Benes 9 who first introduced the mathematical theory of switching networks From that time many research was conducted in this field Switching fabrics found its application not only in telecommunication starting from telephone exchanges through ATM switches and IP routers to optical cross connect systems and optical packet switches but also in other areas of knowledge like

computation and control Theory of switching fabrics becomes also a part of applied mathematics Results of studies carried out by researchers from these area were published in numerous papers and some books This book is intended for people interested in the switching the ory and especially combinatorial characteristics of switching networks It contains a considerable amount of already known results Some of them are presented in more detailed form other are only mentioned

Make: FPGAs David Romano,2016-02-29 What if you could use software to design hardware Not just any hardware imagine specifying the behavior of a complex parallel computer sending it to a chip and having it run on that chip all without any manufacturing With Field Programmable Gate Arrays FPGAs you can design such a machine with your mouse and keyboard When you deploy it to the FPGA it immediately takes on the behavior that you defined Want to create something that behaves like a display driver integrated circuit How about a CPU with an instruction set you dreamed up Or your very own Bitcoin miner You can do all this with FPGAs Because you re not writing programs rather you re designing a chip whose sole purpose is to do what you tell it it s faster than anything you can do in code With Make FPGAs you ll learn how to break down problems into something that can be solved on an FPGA design the logic that will run on your FPGA and hook up electronic components to create finished projects
