Neoplatonism in Late Antiquity Dmitri Nikulin, 2019-03-15 This book is a philosophical study of two major thinkers who span the period of late antiquity While Plotinus stands at the beginning of its philosophical tradition setting the themes for debate and establishing strategies of argument and interpretation Proclus falls closer to its end developing a grand synthesis of late ancient thought The book discusses many central topics of philosophy and science in Plotinus and Proclus such as the one and the many number and being the individuation and constitution of the soul imagination and cognition the constitution of number and geometrical objects indivisibility and continuity intelligible and bodily matter and evil It shows that late ancient philosophy did not simply embrace and borrow from the major philosophical traditions of earlier antiquity Platonism Aristotelianism Stoicism by providing marginal comments on widely known philosophical texts Rather Neoplatonism offered a set of highly original and innovative insights into the nature of being and thought which can be distinguished in much subsequent philosophical thought up until modernity *Autobiographical Memory, Narrative Identity, and Mental Health* Shamsul Haque, Jorge Javier Ricarte, Laura Jobson, Fabrice Berna, 2022-07-04 **Dynamics of Coupled Map Lattices and of Related Spatially Extended Systems** Jean-René Chazottes, Bastien Fernandez, 2005-07-06 This book is about the dynamics of coupled map lattices CML and of related spatially extended systems It will be useful to post graduate students and researchers seeking an overview of the state of the art and of open problems in this area of nonlinear dynamics The special feature of this book is that it describes the mathematical theory of CML and some related systems and their phenomenology with some examples of CML modeling of concrete systems from physics and biology More precisely the book deals with statistical properties of weakly coupled chaotic maps geometric aspects of chaotic CML monotonic spatially extended systems and dynamical models of specific biological systems **Collaborative Circles** Michael P. Farrell, 2003-11 Many artists writers and other creative people do their best work when collaborating within a circle of likeminded friends Experimenting together and challenging one another they develop the courage to rebel against the established traditions in their field Out of their discussions they develop a new shared vision that guides their work even when they work alone In a unique study that will become a rich source of ideas for professionals and anyone interested in fostering creative work in the arts and sciences Michael P Farrell looks at the group dynamics in six collaborative circles the French Impressionists Sigmund Freud and his friends C S Lewis J R R Tolkien and the Inklings social reformers Elizabeth Cady Stanton and Susan B Anthony the Fugitive poets and the writers Joseph Conrad and Ford Maddox Ford He demonstrates how the unusual interactions in these collaborative circles drew out the creativity in each member Farrell also presents vivid narrative accounts of the roles played by the members of each circle He considers how working in such circles sustains the motivation of each member to do creative work how collaborative circles shape the individual styles of the persons within them how leadership roles and interpersonal relationships change as circles develop and why some circles flourish while others

Ecology and the environment, conservation and appropriate technology, politics and philosophy, peace and health, spirituality and world development all these areas and more are reflected in nearly 1500 entries. The entries range from the very short to full length essays reflecting the diversity of the subject matter. All give a clear definition of the meaning of the term and an indication of its etymology and earliest use. But the Dictionary of Green Ideas is much more than simply a list of definitions. The concepts discussed are elaborated upon, interpreted, set in context, exemplified by quotations from a wide range of sources and related to other entries by means of an extensive network of cross references. The result is a fascinating and immensely readable book which successfully fulfils a double role as an accessible introduction to green thought and as a source of reference offering new insights to green thinkers of long standing.
