The Brain and Regulation of Eye Movement A. Shakhnovich,2012-12-06 Dr Shakhnovich brought out the original Russian edition of this work in 1974 Fully half of that book was concerned with his own studies of eye movements These included observations on patients with neuromuscular disorders that produced unique oculomotor deficits Other anomalies of eye motility resulted from local changes in cerebral and cerebellar blood flow and the effects of surgical intervention for aneurisms and brain tumors Supplementary experiments included the probing of single units in the motor and visual brain areas of rabbits Still other studies were done on normal human eye movements with the aid of the Yarbus cap attachment to the cornea of the eye A major aim of the original book was to show that eye movements provide a relatively simple illustration of goal directed behavior This traditional Russian theme developed by Sechenov Pavlov and Bemshtein was put forth as a unifying concept to explain the author's findings Consideration was also given to Western ideas and problems that dominated the research of the 1950's and 1960's Among these as summarized by Dr Shakhnovich were perceptual constancy corollary discharge saccadic suppression and the effects of image stabilization **Comparative Anatomy** Dale W.

Fishbeck,Aurora Sebastiani,2015-03-01 This full color manual is a unique guide for students conducting the comparative study of representative vertebrate animals It is appropriate for courses in comparative anatomy vertebrate zoology or any course in which the featured vertebrates are studied **Evolutionary Biology of Primitive Fishes** R. E. Foreman,A.

Gorbman,J. M. Dodd,R. Olsson,2013-03-09 What precisely is a primitive fish Most biologists would agree that the living cyclostomes selachians crossopterygians etc cannot be considered truly primitive However they and the fossil record have served to provide the information which forms the basis for speculation concerning the nature of the original vertebrates This symposium of biologists from a variety of disciplines was called together to create collectively from the best available current evidence a picture of the probable line of evolution of the prototype primitive fishes The symposium was designed to follow one that took place in Stockholm in 1967 convened for a similar purpose with about the same number of participants It is a matter of interest that almost the entire 1967 symposium Nobel Symposium 4 dealt only with the hard tissues whether fossil or modern In charting the course of the present symposium it was felt that the intervening years have produced numerous lines of new evidence that could be employed in the same way that a navigator determines his position Each field be it adult morphology geology ecology biochemistry development or physiology generates evidence that can be extrapolated backward

from existing vertebrate forms and forward from invertebrate forms If the intersect of only two lines of evidence produces a navigational fix of rather low reliability then an intersect however unfocussed of multiple guidelines from more numerous disciplines might provide a better position from which to judge early vertebrate history

Stance and Motion V.S. Gurfinkel, M.E. Ioffe, J. Massion, J.P. Roll, 2013-11-11 This book dealing with stance and motion was planned in June 1986 at a meeting held in Moscow and Leningrad between a group of Soviet and French scientists interested in motor control This meeting took place in the framework of an exchange program between the USSR Academy of Sciences and the French Centre National de la Recherche Scientifique It was very successful event and was greatly appreciated by all those who attended it Several participants put forward the proposal that the possibility of publishing a book was worth exploring What were the reasons for publishing a book on stance and motion The interest aroused in the participants by each others contributions was not a sufficiently decisive argument It was felt however that a large proportion of the original material presented at the meeting especially in the field of posture and locomotion but also on other aspects covered by the book could be presented in a summarized form which should appeal to a larger audience because the facts and hypotheses they contained especially those from the Soviet participants were not very familiar among

international circles and that many scientists would appreciate having a single volume containing a survey of the current state of research in this field. This was also the opinion of Plenum Press who agreed to publish the book. Each participant at the meeting submitted a paper which was examined by two referees before being accepted.
