Centrally Planned Economies Libor Židek, 2019-05-14 Offering a retrospective view of how the system operated in Communist Czechoslovakia this book is an important voice in the discussion about the systems of central planning The unique features of the book include in depth research comprising both archival records and analyses of around 75 interviews conducted with period managers across a wide range of management levels They provided evidence of pervasive inefficiency resulting in appalling economic outcomes The book begins with a background to the politico sociological system in Czechoslovakia and proceeds to describe the Marxist Leninist ideological foundation of the regime which underpinned the formal setting of the Czechoslovak model These initial chapters set the context for the subsequent analysis of the real functioning of the system The book explores the economic outcomes that must be understood as a natural consequence of the ways in which this system operated The author finishes by answering the important question of why centrally planned economies trailed behind the market economies The book s unique use of the interview research format brings a vivid close up view of the everyday economic life in the centrally planned system This will be a valuable contribution to the discussion surrounding the day to day reality of the system which was found to be more colourful than is generally deemed The book will appeal to both economic historians and students of economic history A warning against repeating past mistakes this book will also be of interest to those seeking a greater knowledge of the realities and consequences of centrally planned economies

Institutions, Behaviour and Economic Theory Heinrich Bortis,1997 This book is about the conceptual foundations of an intermediate way between liberalism and socialism From a standpoint of economic theory this middle way is conceived of as a synthesis of classical Ricardian and Keynesian political economy While the former deals with proportions between individuals or collectives and society in tackling the problems of distribution and value on the basis of the surplus principle the latter is concerned with the scale of economic activity as explained by the principle of effective demand Political economy pictures the economic aspects of the functioning of the institutional system within which the behaviour of individuals is embedded The economy considered is primarily neither a market nor a planned economy but rather a monetary production economy To establish an alternative to liberalism and socialism requires setting up a system of the social sciences In this work suggestions are made for linking political economy with other social sciences i e sociology law and politics in the traditional sense thus establishing the unity of the social sciences In a Keynesian vein the social sciences are conceived of as moral sciences a view which gives rise to a specific philosophy of history To complete the picture issues of method associated with the theory of knowledge in the social sciences and the problem of linking theory with historical reality are also covered

Alienation and the Soviet Economy Paul Craig Roberts, 2017-07-01 In 1971 Paul Craig Roberts created a firestorm among professional Sovietologists by proclaiming that the economies of the USSR and its East Bloc allies were doomed because their planned economies were in reality anything but planned In this revised edition Paul Craig Roberts examines how reality triumphed over Marxist theory and the implications for the future of Russia and eastern Europe Expanding on his original ideas Roberts demonstrates the fatal shortcomings of Marxist economies ranging from misallocation of resources to ersatz capitalistic concepts grafted onto a system that calls for production without regard to profit Roberts argues that the economies of the nations emerging from the USSR's collapse must grasp the profound truths in this book if they are to become viable
