**Handbook of Alternative Theories of Economic Development** Erik S. Reinert, Jayati Ghosh, Rainer Kattel, 2016-09-28  
The Handbook of Alternative Theories of Economic Development explores the theories and approaches which over a prolonged period of time have existed as viable alternatives to today's mainstream and neo-classical tenets. With a total of 40 specially commissioned chapters written by the foremost authorities in their respective fields, this volume represents a landmark in the field of economic development. It elucidates the richness of the alternative and sometimes misunderstood ideas which in different historical contexts have proved to be vital to the improvement of the human condition. The subject matter is approached from several complementary perspectives. From a historical angle, the Handbook charts the mercantilist and cameralist theories that emerged from the Renaissance and developed further during the Enlightenment. From a geographical angle, it includes chapters on African, Chinese, Indian, and Muslim approaches to economic development. Different schools are also explored and discussed, including nineteenth-century US development theory, Marxist, Schumpeterian, Latin American structuralism, regulation theory, and world systems theories of development. In addition, the Handbook has chapters on important events and institutions, including The League of Nations, The Havana Charter, and UNCTAD, as well as on particularly influential development economists. Contemporary topics such as the role of finance, feminism, the agrarian issue, and ecology and the environment are also covered in depth. This comprehensive Handbook offers an unrivalled review and analysis of alternative and heterodox theories of economic development. It should be read by all serious scholars, teachers, and students of development studies, and indeed anyone interested in alternatives to development orthodoxy.

**Resource Sustainability and Caribbean Development** Duncan F. M. McGregor, David Barker, Sally Lloyd-Evans, 1998  
Resource Sustainability and Caribbean Development follows on from Barker and McGregor's earlier edited volume *Environment and Development in the Caribbean: Geographical Perspectives* 1995 and aims to focus more specifically on the theme of sustainability and to examine research contributions of geographers to problems of sustainability in the Caribbean region. While the problems of environmental degradation have increased in recent decades, the ability of Caribbean governments to cope with the consequences appears to have been eroded. There is, however, a growing recognition within the region of the need for development strategies that focus on the social needs of the people yet simultaneously protect the fragile natural environment. It is hoped that the research presented here will serve to inform the wider research and decision-making community of the main problems associated with resource sustainability in the region and of some of the major research directions crucial to the alleviation of these problems.

**Preface** *Economics of the SDGs* Edward B. Barbier, Joanne C. Burgess, 2021-07-28  
This is the first book that employs economics to develop and apply an analytical framework for assessing progress towards the Sustainable Development Goals (SDGs). The authors explore the historical context for the underlying sustainability concept, develop an economics-based analytical framework for assessing progress towards the SDGs.

and discuss the implications for sustainability policy and future research Economics is concerned with analysing the trade offs in allocating scarce means to achieve various ends Thus economic methods are ideally suited to assessing how progress towards one or more SDGs may come at the expense of achieving other goals Such interactions are inevitable in meeting the 2030 Agenda over the next decade given that the SDGs include different economic social and environmental elements Although it may be possible to make progress across all 17 goals by 2030 it is more likely that improvement toward all goals will be mixed For example we may have reduced poverty or hunger over recent years but the way in which this progress has been achieved e g through economic expansion and industrial growth may have come at the cost in achieving some environmental or social goals On the other hand progress in reducing poverty is likely to go hand in hand with other important goals such as eliminating hunger improving clean water and sanitation and ensuring good health and well being Assessing these interactions is essential for guiding policy so that countries and the international community can begin implementing the right set of environmental social and economic policies to achieve more sustainable and inclusive global development

**Sustainability, growth, and poverty alleviation** Stephen A. Vosti, Thomas Anthony Reardon, 2007-01-01 Developing countries are under pressure to produce more food for their growing populations conserve natural resources and reduce poverty In the short term however these goals may compete with one another This book focuses on the interactions between agricultural growth and environment and between environment and poverty The chapters analyze and illustrate these interactions with case study evidence from the developing world in general and from specific agroclimatic zones in Africa Asia and Latin America The contributors also discuss what these links mean for development policies agricultural technologies and social and economic institutions With a clearer picture of how these goals interact policymakers and researchers can design strategies for working more effectively to meet them

Ecological Economics Michael Common, Sigrid Stagl, 2005-10-13 Taking as its starting point the interdependence of the economy and the natural environment this book provides a comprehensive introduction to the emerging field of ecological economics The authors who have written extensively on the economics of sustainability build on insights from both mainstream economics and ecological sciences Part I explores the interdependence of the modern economy and its environment while Part II focuses mainly on the economy and on economics Part III looks at how national governments set policy targets and the instruments used to pursue those targets Part IV examines international trade and institutions and two major global threats to sustainability climate change and biodiversity loss Assuming no prior knowledge of economics this textbook is well suited for use on interdisciplinary environmental science and management courses It has extensive student friendly features including discussion questions and exercises keyword highlighting real world illustrations further reading and website addresses

**Unwelcome Harvest** Gordon R. Conway, Jules N. Pretty, 2013-11-05 Agriculture Pollutes pesticides can destroy wildlife and some are toxic to humans some fungicides and herbicides cause cancer Nitrates result in the contamination of drinking

water and produce the risk of the blue baby syndrome in infants and of stomach cancer in adults Agriculture produces methane ammonia nitrous oxide and the products of burning off all of which add to the world's problems of acid rain depletion of the ozone layer and global warming This book which focuses on the UK the USA and Third World countries is the first comprehensive review of agriculture and pollution it examines the facts and assesses the relative dangers of each pollution problem It also considers the effects of pollution on agriculture itself crop yields are depressed and livestock damaged by various forms of pollution from all sources The authors offer solutions to these apparently overwhelming problems and describe existing technology which would allow us to deal with them Originally published in 1991

R. Redclift, Michael Redclift, 2005-09-22 This four volume set introduces the reader to sustainability as a concept a contested idea and a political goal and brings together a range of articles and published papers that have influenced the course of thinking in social science Paradise Lost? Edward B. Barbier, Joanne C. Burgess Barbier, Carl Folke, 2019-09-18 Originally published in 1994 *Paradise Lost* is the outcome of a unique collaboration between economists and ecologists initiated by the Beijer Institute of the Royal Swedish Academy of Sciences The book examines how the loss of biodiversity is one of the most serious problems the world faces and suggests that new interdisciplinary thinking is required to safeguard both us and the biosphere from the effects of species extinction The book examines how an integrated interdisciplinary approach to the conservation of biodiversity can understand and tackle the issue It provides an overview of the causes of the problem and examines previous approaches to dealing with it The book also addresses how the loss of biodiversity affects natural systems and provides an examination of environmental policy while discussing how this has been affected by the ecological limits to economic activity This book will be of interest to both academics and students of environmental sciences economics and politics *International Encyclopedia of the Social & Behavioral Sciences* Neil J. Smelser, Paul B. Baltes, 2001 The largest work ever published in the social and behavioural sciences It contains 4000 signed articles 15 million words of text 90 000 bibliographic references and 150 biographical entries Obstacles to Environmental Progress Peter C. Schulze, 2022-08-22 Why when so many people understand the severity of environmental problems is progress so slow and sustainability such a distant goal What gets in the way Perhaps you have immediately thought of several barriers In *Obstacles to Environmental Progress* Peter Schulze identifies 18 practical obstacles that routinely and predictably

hinder U S progress on existing environmental problems The obstacles apply to problems small and large and in most cases regardless of whether an issue is controversial Though the book focuses on the U S most of the obstacles pertain elsewhere as well The obstacles fall into three categories scientific challenges to anticipating and detecting problems political and economic factors that interfere with responding and obstacles to effective responses While all the obstacles are predictable and common they have not been systematically studied as related phenomena perhaps because they span a wide range of academic disciplines In practice they often arise as surprises that are then addressed in an ad hoc manner Might they be better understood and thus more readily anticipated and overcome or avoided The book seeks to hasten environmental progress by forewarning and thus forearming those who are striving or will soon be striving for environmental progress and by drawing scholarly attention to the obstacles as a set of related phenomena to systematically understand and more quickly overcome Praise for *Obstacles to Environmental Projects* I have never come across another book that gives students such an accessible and helpful guide to the broad scope of the challenges facing an environmentally sound and sustainable future Al Wurth Lehigh University

*Nature and Wealth* Edward Barbier, 2015-09-22 Drawing on historical and contemporary evidence this book argues that growing environmental degradation and wealth inequality are linked to how nature is exploited to create economic wealth Ending the under pricing of natural capital and insufficient human capital accumulation is essential to overcoming structural imbalance in modern economies

*Economic Development and Environmental Policy* Omar Noman, 1996 First published in 1996 Routledge is an imprint of Taylor Francis an informa company

**Institutions and the Environment** Arild Vatn, 2007-01-01 Vatn has prepared a vast feast for his readers Hopefully this book will become one of the core textbooks both in institutional economics and in resource economics As a political scientist I can recommend it to social scientists more generally I must confess I enjoyed it all Elinor Ostrom 2009 Nobel Laureate Land Economics

*Institutions and the Environment* indeed serves as a first rate starting point for students and researchers regardless of whether they are mainly interested in institutions in general or environmental governance and ecological economics in particular Charlotta S derberg *Environmental Politics* This timely book is about institutions how they develop how they function and how they solve problems This book exemplifies the fine institutionalist tradition of using knowledge to solve pressing problems in fact institutionalists will find little here to criticize The scope of this book is wide policy makers government officials institutionalists environmentalists and the general public will all benefit from reading this book Keep this book handy you ll want to make frequent references as the global warming policy debate unfolds Jack Reardon *Journal of Economic Issues* Vatn s book addresses the urgent question of environmental policy and shows that an understanding of the role of institutions is vital in this area It incorporates insights on institutions from both mainstream and heterodox traditions of thought Magisterial and comprehensive it is both a textbook and an inspiring pioneering monograph Geoffrey M Hodgson University of Hertfordshire UK This is an excellent book which can be read at different levels I very much enjoyed reading

this book and would recommend it to anyone interested in these issues I feel it is likely to become one of the core text books on the topic Neil Powe Newcastle University UK We have here an encompassing work of remarkable clarity and coherence demonstrating the enduring pertinence of classical institutional economics to the vexing issues of our time While most of the illustrative examples come from the realm of environmental problems the reach of this fine book goes far beyond this particular issue and informs how we ought to think about all aspects of public policy Daniel W Bromley University of Wisconsin Madison US This is a superb book on institutional economics and environmental policy Vatn has written the definitive exposition of the theory and policy approaches of modern institutional economics It not only builds on the work of the best institutional economists from Veblen to Bromley and Hodgson it also incorporates the extremely relevant and exciting research now being done in contemporary mainstream economics With the demise of Walrasian economics and the current drive for the unification of the behavioral sciences the time is ripe for institutional economics to once again become a dominant school of economic thought Vatn s book shows the way John Gowdy Rensselaer Polytechnic Institute US This important text develops an institutional response to the core issues raised in public policy making and develops a distinct understanding of the role of institutions not least in the study of environmental problems It questions how are conflicting interests shaped and taken into account in policy making How should they be accounted for What motivates the behaviour of firms and individuals and how is it possible to change these motivations to produce the favoured common outcomes The author addresses these questions by integrating elements from classical institutional economics neoclassical economics sociology and ecological economics He argues that public policy in general and environmental policy in particular are best examined from an institutional perspective In this way the author presents a distinct and consistent alternative to standard neoclassical economics for students and scholars who

*Unveiling Wealth* Peter Bartelmus, 2007-05-08 Does money blur perspectives for a better life Lifting the money veil from our yardsticks of progress income and wealth reveals the trade offs of economic growth The book presents new indicators of the social economic and ecological impacts of our lifestyles and production techniques The indicators help to identify those responsible for these impacts and account for their accountability in terms of environmental and other social costs Sustainable development is to bring about long term prosperity without undermining its natural foundation For the assessment of the opaque concept we need both physical impact measures and environmentally modified green indicators of income capital and output Peter Bartelmus opens the dialogue between frequently hostile camps of economists and environmentalists data producers and users and scientists and policy makers Together they may steer us towards a sustainable future
