Reforming agricultural support for improved environmental outcomes Mamun, Abdullah, Martin, Will, Tokgoz, Simla, 2019-12-18 Agricultural support has changed substantially in both rich and poor countries in recent years In rich countries there has been a strong move to decoupled subsidies and a fall in average rates of protection In developing countries market price support remains the dominant form of

protection and average rates of support have risen breaking the traditional pattern of taxing agriculture Emissions from agriculture and land use change have contributed up to a third of total greenhouse gas emissions with beef milk and rice production accounting for more than 80 percent of agricultural emissions Agricultural support was biased against emission intensive goods until recent years and is now only slightly biased towards them Although emission intensities are relatively higher in the developing countries they have fallen far more rapidly in developing countries than in the rich countries in the past quarter century as agricultural productivity has grown in developing countries Policy reform will be challenging given the strong political economy support for the current structure of protection Increasing investments in research and development to raise productivity and lower the emissions intensity of agricultural output would help agriculture and the environment

One Economics, Many Recipes Dani Rodrik,2008-12-29 In *One Economics Many Recipes* leading economist Dani Rodrik argues that neither globalizers nor antiglobalizers have got it right While economic globalization can be a boon for countries that are trying to dig out of poverty success usually requires following policies that are tailored to local economic and political realities rather than obeying the dictates of the international globalization establishment A definitive statement of Rodrik s original and influential perspective on economic growth and globalization *One Economics Many Recipes* shows how successful countries craft their own unique strategies and what other countries can learn from them To most proglobalizers globalization is a source of economic salvation for developing nations and to fully benefit from it nations must follow a universal set of rules designed by organizations such as the World Bank the International Monetary Fund and the World Trade Organization and enforced by international investors and capital markets But to most antiglobalizers such global rules spell nothing but trouble and the more poor nations shield themselves from them the better off they are Rodrik rejects the simplifications of both sides showing that poor countries get rich not by copying what Washington technocrats preach or what others have done but by overcoming their own highly specific constraints And far from conflicting with economic science this is exactly what good economics teaches

Journal of Transport Economics and Policy ,2004 Moments of Truth Francisco Panizza,George Philip,2013-11-07 The current financial and sovereign debt crisis of the European Union and the United States can be regarded as the most recent of a wave of financial and sovereign debt crises that have affected different regions of the world over the past quarter century While there is a large and growing body of literature on the economic aspects of financial crises its political elements remain surprisingly under studied Moments of Truth The Politics of Financial Crises in Comparative Perspective fills this gap in the literature by looking at the political repercussions and policy implications of financial crises in comparative perspective using case studies in Latin America Korea and Russia as well as the contemporary crises in the US and in key European countries Contributors to this volume look at the crises as critical junctures that generate high levels of uncertainty while calling for decisive action The chapters emphasize structural or agency based explanations and give relevance to the role of ideas interests and institutions in explaining different outcomes The questions addressed by the case studies include how the crises were defined by key actors the range of political and policy options available to deal with their impact the role of ideas in policy shifts how political and economic actors redefine their interests in contexts of uncertainty how political institutions mediate reactions to the crises what explains the choice of a certain option over other alternatives and whether the crisis has so far resulted in significant political and policy changes or in incremental adjustments to the status quo The first book to comparatively analyze the political dimensions of financial crises across different global regions Moments of Truth will be highly significant for any scholars interested in the contemporary debate on financial crises The Political Economy of Water and Sanitation Matthias Krause,2010-04-02 Advances in human development are closely linked to increasing access to

water and sanitation WS services in developing countries Utilizing data from 69 nations Krause argues that the level of democratic governance has a statistically significant positive impact on access to WS services from influencing policy making to managing providers
