Ecotourism An Livelihoods Capacity Building For Local Authorities:

Eco-Tourism And Livelihoods: Capacity Building For Local Authorities A.K. Bhattacharya, 2005 Tourism is the most rapidly growing and biggest civilian industry in the world and ecotourism forms the largest proportion of the present tourism. Since ecotourism involves maximum number of stakeholders from local communities to the corporate world proper capacity building of the major stakeholders for effective planning and management of ecotourism has become a prerequisite for the sustainable ecotourism development. This book attempts to fill in this gap. The book addresses the key issues concerning ecotourism management with special focus on community participation. It deals with a range of topics including the basic concept, forms, potential, assessment, planning and case studies of ecotourism. At the same time it discusses the new concepts and techniques of ecotourism viz carrying capacity, community participation and auditing. The book will be useful for practitioners, researchers and other stakeholders in planning and implementation of ecotourism. **Public People Private**

A.K. Bhattacharya, 2005 Biodiversity: An Overview Mukesh Kumar, G.S. Paliwal, 2011-07-15 India's phytodiversity is one of the most significant in the world. India is one of the twelve mega biodiversity centers in the world and also an important center of origin of agrobiodiversity. It is therefore very important to study, document and conserve the plant wealth of India and also of the world before its possible extinction. There are convincing scientific, economic and sociological reasons for giving priority to the conservation of the major centers of plant diversity throughout the world. The strategies to conserve the biodiversity include establishment of protected area network and corridors with emphasis on appropriate levels of management, reduction of anthropogenic pressure on natural populations by cultivating them elsewhere, programmes of augmentation, reintroduction and introduction of target taxa, restoration of degraded habitats etc. The conservation strategies can be either in situ conservation of genetic resources within their ecosystem and natural habitat or ex situ conservation of components of genetic material of biological diversity outside their natural habitat. The choice of conservation strategy depends upon the nature of the material to be conserved i.e. the life cycle and mode of reproduction, size of individual population and ecological status. Ex situ techniques include the establishment of botanical and zoological gardens, banks of pollen, seed, tissue culture, DNA etc. Establishment of forest reserves, national parks, protected areas and on farm conservation of valuable plant varieties is being promoted to facilitate their in situ conservation. *Proceedings of the 9th International Conference on Accounting, Management, and Economics 2024 (ICAME 2024)* Mursalim Nohong, Fitra Roman Cahaya, Phung Minh Tuan, Arifuddin Mannan, Anas Iswanto Anwar, Rianda Ridho Hafizh Thaha, Rakhmat Nurul Prima Nugraha, Andi Tenri Harahap, Muhammad Try Dharsana, Fakhru Indra Hermansyah, 2025-08-30 This is an open access book.
