Alpert,Tatiana Sholokhman,2011-02-10 Modeling atmospheric processes in order to forecast the weather or future climate
change is an extremely complex and computationally intensive undertaking One of the main difficulties is that there are a
huge number of factors that need to be taken into account some of which are still poorly understood The Factor Separation
FS method is a computational procedure that helps deal with these nonlinear factors In recent years many scientists have
applied FS methodology to a range of modeling problems including paleoclimatology limnology regional climate change
rainfall analysis cloud modeling pollution crop growth and other forecasting applications This book is the first to describe the
fundamentals of the method and to bring together its many applications in the atmospheric sciences The main audience is
