

The background of the slide is a light gray color, decorated with numerous colorful ovals and small dots. The ovals are in various colors including red, blue, yellow, green, purple, and orange, and are scattered across the entire surface. The dots are smaller and in lighter shades of the same colors, creating a festive, confetti-like pattern.

Mathematical and Statistical Modeling for Emerging and Re-emerging Infectious Diseases Gerardo Chowell, James M. Hyman, 2016-07-27 The contributions by epidemic modeling experts describe how mathematical models and statistical forecasting are created to capture the most important aspects of an emerging epidemic Readers will discover a broad range of approaches to address questions such as Can we control Ebola via ring vaccination strategies How quickly should we detect Ebola cases to ensure epidemic control What is the likelihood that an Ebola epidemic in West Africa leads to secondary outbreaks in other parts of the world When does it matter to incorporate the role of disease induced mortality on epidemic models What is the role of behavior changes on Ebola dynamics How can we better understand the control of

cholera or Ebola using optimal control theory How should a population be structured in order to mimic the transmission dynamics of diseases such as chlamydia Ebola or cholera How can we objectively determine the end of an epidemic How can we use metapopulation models to understand the role of movement restrictions and migration patterns on the spread of infectious diseases How can we capture the impact of household transmission using compartmental epidemic models How could behavior dependent vaccination affect the dynamical outcomes of epidemic models The derivation and analysis of the mathematical models addressing these questions provides a wide ranging overview of the new approaches being created to better forecast and mitigate emerging epidemics This book will be of interest to researchers in the field of mathematical epidemiology as well as public health workers

Modeling Anomalous Diffusion: From Statistics To Mathematics Weihua Deng,Ru Hou,Wanli Wang,Pengbo Xu,2020-01-06 This book focuses on modeling the anomalous diffusion phenomena being ubiquitous in the natural world Both the microscopic models stochastic processes and macroscopic models partial differential equations have been built up The relationships between the two kinds of models are clarified and based on these models some statistical observables are analyzed From statistics to mathematics the built models show their power with their associated applications This book is important for students to develop basic skills to be able to succeed in their future research In addition to introducing the related models or methods it also provides the corresponding applications and simulation results which will attract more readers ranging from mathematicians to physicists or chemists to name a few
