Gottfried Semper Architect Of The Nineteenth Century:

Gottfried Semper Harry Francis Mallgrave,1996-01-01 Biografie van de Duitse architect en architectuurtheoreticus 1803 1879 **Gottfried Semper** Harry Francis Mallgrave,1995 Gottfried Semper Harry Francis Mallgrave,Valentin Hammerschmidt,1997 Walter Benjamin and Architecture Gevork Hartoonian,2009-10-27 Drawing from Walter Benjamin's ideas the essays compiled in this book contribute to a critical understanding of contemporary architectural theories

The Architect's Brain Harry Francis Mallgrave,2009-12-21 The Architect's Brain Neuroscience Creativity and Architecture is the first book to consider the relationship between the neurosciences and architecture offering a compelling and provocative study in the field of architectural theory Explores various moments of architectural thought over the last 500 years as a cognitive manifestation of philosophical psychological and physiological theory Looks at architectural thought through the lens of the remarkable insights of contemporary neuroscience particularly as they have advanced within the last decade Demonstrates the neurological justification for some very timeless architectural ideas from the multisensory nature of the architectural experience to the essential relationship of ambiguity and metaphor to creative thinking **Modern Architecture: A Very Short Introduction** Adam Sharr,2018-11-15 Somewhere between 1910 and 1970 architecture changed Now that modern architecture has become familiar sometimes celebrated sometimes vilified it's hard to imagine how novel it once seemed Expensive buildings were transformed from ornamental fancies which referred to the classical and medieval pasts into strikingly plain reflections of novel materials functions and technologies Modern architecture promised the transformation of cities from overcrowded conurbations characterised by packed slums and dirty industries to spacious realms of generous housing and clean mechanised production set in parkland At certain times and in certain cultures it stood for the liberation of the future from the past This Very Short Introduction explores the technical innovations that opened up the cultural and intellectual opportunities for modern architecture to happen Adam Sharr shows how the invention of steel and reinforced concrete radically altered possibilities for shaping buildings transforming what architects were able to imagine as did new systems for air conditioning and lighting While architects weren't responsible for these innovations they were among the first to appreciate how they could make the world look and feel different in connection with imagery from other spheres like modern art and industrial design Focusing on a selection of modern buildings that also symbolize bigger cultural ideas Sharr discusses what modern architecture was like why it was like that and how it was imagined Considering the work of some of the historians and critics who helped to shape modern architecture he demonstrates how the field owes as much to its storytellers as to its buildings ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable Evolution and Victorian Culture Bernard V. Lightman,Bennett Zon,2014-05-29

These essays examine the dynamic interplay between evolution and Victorian culture mapping new relationships between the arts and sciences

German Architecture for a Mass Audience Kathleen James-Chakraborty, 2002-09-06 This book vividly illustrates the ways in which buildings designed by many of Germany's most celebrated twentieth century architects were embedded in widely held beliefs about the power of architecture to influence society German Architecture for a Mass Audience also demonstrates the way in which these modernist ideas have been challenged and transformed most recently in the rebuilding of central Berlin

Framing Formalism Richard Woodfield, 2013-10-23 Alois Riegl 1858-1905 was one of the founding fathers of modern formalist criticism As a member of the Vienna School of Art Historians he shared their range of interests in the decorative arts art in transition conservation and monuments This collection of critical essays examines various facets of Riegl's work and opens with a new translation of Hans Sedlmayr's famous and notorious *Die Quintessenz der Lehren Riegls* Included is Julius von Schlosser's assessment of Riegl's contribution to the Vienna School of Art Historians as well as essays by a team of international scholars This book offers a re-engagement with the ideas of one of the most important and neglected art historians of the 20th century

Style and Solitude Mari Hvattum, 2023-06-06 How modern notions of architectural style were born and the debates they sparked in nineteenth century Germany The term style has fallen spectacularly out of fashion in architectural circles Once a conceptual key to understanding architecture's inner workings today style seems to be associated with superficiality formalism and obsolete periodization But how did style once defined by German sociologist Georg Simmel as a place where one is no longer alone in architecture actually work How was it used and what did it mean In *Style and Solitude* Mari Hvattum seeks to understand the apparent death of style returning to its birthplace in the late eighteenth century and charting how it grew to influence modern architectural discourse and practice As Hvattum explains German thinkers of the eighteenth and nineteenth century offered competing ideas of what style was and how it should be applied in architecture From Karl Friedrich Schinkel's thoughtful eclecticism to King Maximilian II's attempt to capture the *zeitgeist* in an architectural competition style was at the center of fascinating experiments and furious disputes Starting with Johann Joachim Winckelmann's invention of the period style and ending a century later with Gottfried Semper's generative theory of style Hvattum explores critical debates that are still ongoing today

Tracing Modernity Mari Hvattum, Christian Hermansen, 2004 First Published in 2004 Routledge is an imprint of Taylor Francis an informa company

German Façade Design Randall Ott, 2016-09-17 German architecture prior to the modern period has received less systemic analytical study than that of Italy France and Britain Scholarly discussion of broad traditions or continuities within Germanic or Central European facade design is even sparser Baroque era studies of the region mostly devote themselves to isolated architects monuments or movements Modernism's advent decisively changed this Germanic architecture enjoyed sudden ascendancy Yet even so study specifically of that region's faades still lagged nothing compares to the dozens of treatments of Le Corbusier's facade systems for example and how these juxtapose with

French neoclassical or Italian Renaissance methods Given the paucity of multi period studies one can be forgiven for believing Germany's effervescence of radical modern works seems unprecedented This book takes up these multiple quandaries It identifies and documents a previously unrecognized compositional tradition characterized here as the screen facade and posits it as a counter narrative critiquing the essentialist authentic canon currently dominant in Western architectural history By crossing evenly over the dividing line between the historical and modern periods it offers valuable insights on indigenous roots underlying some aspects of Germany's invigorating early twentieth century architectural developments The book chronologically examines 400 years of closely related facades concentrated in Germany but also found in Austria the Czech Republic German speaking Switzerland and nearby areas of Central Europe While nearly 75 buildings are mentioned and illustrated a dozen are given extensive analysis and the book focuses on the works of three architects Schinkel Behrens and Mies Relationships between examples of these three architects' facades far transcend mere homage amongst masters Glimmers of the system they eventually codify are apparent as early as at Heidelberg Castle in 1559 and Nürnberg's Rathaus in 1622 The book argues that in Germany northern Gothic affinities for bisection intense repetition and rote aggregation intersected with southern Classical affinities for symmetry hierarchy and centrality thereby spawning a unique hybrid product the screen facade Instead of graphic formality this study is guided by on site perceptions propositional contrasts means of approach interpretive conflicts and emotion and it relates the design of these facades to concepts proposed by contemporary philosophers including Novalis Hegel Nietzsche Freud Adorno and most importantly Gadamer on hermeneutics

Unexpected Affinities Pablo Meninato, 2018-05-23 While the concept of type has been present in architectural discourse since its formal introduction at the end of the eighteenth century its role in the development of architectural projects has not been comprehensively analyzed This book proposes a reassessment of architectural type throughout history and its impact on the development of architectural theory and practice Beginning with Laugier's 1753 *Essay on Architecture* *Unexpected Affinities: The History of Type in the Architectural Project* from Laugier to Duchamp traces type through nineteenth and twentieth century architectural movements and theories culminating in a discussion of the affinities between architectural type and Duchamp's concept of the readymade Includes over sixty black and white images

The Shock of Recognition Lewis Pyenson, 2020-10-12 In *The Shock of Recognition* Lewis Pyenson uses a method called Historical Complementarity to identify the motif of non figurative abstraction in modern art and science He identifies the motif in Picasso's and Einstein's educational environments He shows how this motif in domestic furnishing and in urban lighting set the stage for Picasso's and Einstein's professional success before 1914 He applies his method to intellectual life in Argentina using it to address that nation's focus on an inventory of the natural world until the 1940s its adoption of non figurative art and nuclear physics in the middle of the twentieth century and attention to landscape painting and the wonder of nature at the end of the century

Nexus Network Journal 14,1 Kim Williams, 2014-05-15 The Winter

2012 vol 14 no 1 issue of the Nexus Network Journal is dedicated to the theme Architecture Systems Research and Computational Sciences This is an outgrowth of the session by the same name which took place during the eighth international interdisciplinary conference Nexus 2010 Relationships between Architecture and Mathematics held in Porto Portugal in June 2010 Today computer science is an integral part of even strictly historical investigations such as those concerning the construction of vaults where the computer is used to survey the existing building analyse the data and draw the ideal solution What the papers in this issue make especially evident is that information technology has had an impact at a much deeper level as well architecture itself can now be considered as a manifestation of information and as a complex system The issue is completed with other research papers conference reports and book reviews **Architecture and**

Civilization ,2022-05-20 **What is Architecture?** Andrew Ballantyne,2013-11-05 Architecture can influence the way we feel and can help us along as we go about our lives or sabotage our habitual ways of doing things The essays collected here challenge and help to define a view of architecture which ranges from the minimal domesticity of Diogenes barrel to the exuberant experiments of the contemporary avant garde There are essays by philosophers architects and art historians including Roger Scruton Bernard Tschumi Demetri Pophyrios Kenneth Frampton Diane Ghirardo and David Goldblatt

Bauhaus Construct Jeffrey Saletnik,Robin Schuldenfrei,2013-03-01 Reconsidering the status and meaning of Bauhaus objects in relation to the multiple re tellings of the school s history this volume positions art objects of the Bauhaus within the theoretical artistic historical and cultural concerns in which they were produced and received Contributions from leading scholars writing in the field today including Frederic J Schwartz Magdalena Droste and Alina Payne offer an entirely new treatment of the Bauhaus Issues such as art and design pedagogy the practice of photography copyright law and critical theory are discussed Through a strong thematic structure new archival research and innovative methodologies the questions and subsequent conclusions presented here re examine the history of the Bauhaus and its continuing legacy Essential reading for anyone studying the Bauhaus modern art and design **Architecture Re-assembled** Trevor

Garnham,2013-04-26 Beginning from the rise of modern history in the eighteenth century this book examines how changing ideas in the discipline of history itself has affected architecture from the beginning of modernity up to the present day It reflects upon history in order to encourage and assist the reader in finding well founded principles for architectural design This is not simply another history of architecture nor a history of histories Setting buildings in their contemporaneous ideas about history it spans from Fischer von Erlach to Venturi and Rossi and beyond to architects working in the fallout from both the Modern Movement Aalto Louis Kahn Aldo van Eyck and Post modernism such as Rafael Moneo and Peter Zumthor It shows how Soane Schinkel and Stirling amongst others made a meaningful use of history and contrasts this with how a misreading of Hegel has led to an abuse of history and an uncritical flight to the future This is not an armchair history but a lively discussion of our place between past and future that promotes thinking for making Aesthetics of Interdisciplinarity:

Art and Mathematics Kristóf Fenyvesi, Tuuli Lähdesmäki, 2017-11-28 This anthology fosters an interdisciplinary dialogue between the mathematical and artistic approaches in the field where mathematical and artistic thinking and practice merge. The articles included highlight the most significant current ideas and phenomena providing a multifaceted and extensive snapshot of the field and indicating how interdisciplinary approaches are applied in the research of various cultural and artistic phenomena. The discussions are related for example to the fields of aesthetics, anthropology, art history, art theory, artistic practice, cultural studies, ethno mathematics, geometry, mathematics, new physics, philosophy, physics, study of visual illusions and symmetry studies. Further, the book introduces a new concept, the interdisciplinary aesthetics of mathematical art, which the editors use to explain the manifold nature of the aesthetic principles intertwined in these discussions.
