R. Müller, 2006-05-12 The Continuous Casting 2000 symposium maintains the tradition established in 1976 of holding regular events This millennium event however is the first international meeting of the series The aim is to highlight the importance of continuous casting of aluminum copper and magnesium to the international fabricating industry focusing on technological advances in all the sectors that are important for the manufacture of high quality continuous cast products Magnesium Alloys Frank Czerwinski, 2014-11-05 Magnesium alloys with their unique physical and chemical properties are important candidates for many modern engineering applications Their density being the lowest of all structural metals makes them the primary choice in global attempts aimed at reducing the weight of transportation vehicles However magnesium also creates challenges at certain stages of raw alloy melting fabrication of net shape components and their service The first one is caused by very high affinity of magnesium to oxygen which requires protective atmospheres increasing manufacturing cost and heavily contributing to greenhouse gas emissions The second

challenge relates to very high corrosivity of liquid magnesium towards materials it contacts This imposes restrictions on the selection of materials used to contain transfer or process molten magnesium during manufacturing operations A mixture of unique benefits and serious challenges of magnesium alloys in solid and liquid states described here makes the book very useful for a broad audience of scientists and engineers from academia and industry Iron & Steelmaker ,1990-07 CIM Bulletin Canadian Institute of Mining and Metallurgy,1997 *Aluminium Alloys 2002 - ICAA8* Peter J.
