Woodruff-Pak, Joseph Steinmetz, 2010-12-03 The model system of eyeblink classical conditioning in humans has enormous potential for the understanding and application of fundamental principles of learning This collection makes classical conditioning accessible to teachers and researchers in a number of ways The first aim is to present the latest developments in theory building Second as background for the current directions Eyeblink Classical Conditioning Volume I presents an overview of a large body of previously published research on eyeblink classical conditioning Last the authors describe eyeblink classical conditioning techniques Each chapter includes a highlighted methods section so that interested readers can replicate techniques for teaching and research

**Eyeblink Classical Conditioning Volume 2** Diana S. Woodruff-Pak, Joseph E. Steinmetz, 2007-05-08 Classical conditioning of the nictitating membrane NM eyeblink response in rabbits is a useful model system for the study of the neurobiology of learning and memory This paradigm that is so well described on a biological level has also been applied to studies of normal development over the life span and to instances of abnormal developmental phenomena Eyeblink conditioning has been studied from molecular and neural network perspectives and the paradigm is of demonstrated utility in elucidating mechanisms in physiology and pharmacology This model system provides a behavioral paradigm in animals that has a close analog in human behavior Perspectives of recent developments in human eyeblink classical conditioning research are presented in the companion volume to this book Eyeblink Classical Conditioning Applications in Humans

Eyeblink Conditioning in Psychiatric Conditions - State of the Field and Future Directions Tracy L. Greer, Lucien T. Thompson,2017-09-22 Eyeblink classical conditioning EBC is a model paradigm for associative also termed Pavlovian learning one of the simplest and best understood forms of learning and memory Because EBC paradigms are readily adapted across species the neural substrates of EBC have been well characterized and include but are not limited to the cerebellum and anterior interpositus nucleus the hippocampus and prefrontal cortices The ability to collect EBC data across many different species i e including but not limited to humans also has the distinct advantage of facilitating translational research and therefore may be of particular benefit to elucidate mechanistic changes associated with a wide variety of psychiatric disorders In fact EBC paradigms have been employed to assess individuals with a wide range of neurological deficits including Korsakoff's amnesia Alzheimer's disease as well as normal aging dyslexia inflammatory tremor dystonia and multiple sclerosis and psychiatric disorders including major depressive disorder anxiety disorders schizophrenia autism and alcohol use addiction disorders Individuals with these disorders exhibit differential impairments across different EBC task types e g delay vs trace EBC with some showing impairment in one but not the other task and some showing impairments in both across learning stage e g acquisition discrimination or extinction and across response variables e g magnitude and timing of the conditioned eyeblink motor response modality of the conditioned stimulus Evaluating specific individual differences in the context of variable brain pathology should aid characterization and refinement of our understanding of complex neuropsychiatric disorders The field of psychiatry has seen a transition from more traditional use of symptom clusters to define psychiatric disorders with subsequent examination of associated behaviors and traits to the use of physiological and behavioral indicators to characterize individuals with respect to various psychological domains in line with the National Institute of Mental Health Research Domain Criteria RDoC initiative This approach employs a neuroscience based framework to assess the pathophysiology of chronic mental illnesses Behavioral and cognitive processes are critical domains of interest in evaluating potential maladaptive patterns that may be indicative of specific psychopathologies Furthermore the rapid development of technological advances that allow for more detailed examination e g EEG MEG MRI fMRI infrared imaging and manipulation e g transcranial magnetic and direct current stimulation of brain functions should enhance our ability to better characterize EBC performance and its utility in characterizing aspects of particular neuropathologies Substantial research evidence exists for the value of EBC paradigms to inform our understanding of the pathophysiology underlying a wide variety of neurological and psychiatric disorders Despite these findings this readily

implemented classic cognitive behavioral paradigm is relatively underutilized in clinical settings This e book highlights recent convergence of clinical and research efforts in this area and aims to promote a resurgent interest in eyeblink classical conditioning and to emphasize the potential for future translational and diagnostic applications of EBC in combination with other techniques to strengthen our understanding of alterations in brain function manifested in behaviors characteristic of specific psychopathologies

Lavond, Joseph E. Steinmetz, 2012-12-06 When conducting scientific research in any field it is not sufficient to simply design thoughtful and informative experiments to explore ideas and hypotheses The experiments must be conducted in such a manner that the data generated effectively address the ideas and hypotheses under study Collecting good data necessitates the use of good methods techniques and instrumentation Behavioral neuroscience is most certainly a field that over the years has required novel inventive and effective methods and techniques to collect data on a rather difficult subject namely how the brain and nervous system encode behavior Perhaps one of the most interesting things about the field of behavioral neuroscience is that most scientists in this field are engaged in a variety of activities it is not always the same boring routine The rule not the exception in this field is that investigators are trained in a variety of techniques and skills This work requires knowledge of skills in such diverse techniques as surgery animal training basic electronics computer programming statistics and histology as well as having a good theoretical background knowledge of the relevant literature and the creativity and logic necessary to design and execute critical experiments One does not have to be an expert in all of these skills and conversely not all skills require an expert **Cholinergic Mechanisms** Israel Silman, Hermona Soreq, Lili Anglister, Daniel M.
