**Extinct and Vanishing Birds of the World** James C. Greenway, Jr., 1979-01-01 *Extinct and Vanishing Birds of the World* James Cowan Greenway, 1958 **Extinct and vanishing birds of the world, by james greenway** James c Greenway, 1967 **Extinct and Vanishing Birds of the World** James Cowan Greenway (jr.), 1958 **Extinct Birds** Julian P. Hume, 2017-08-24 A comprehensive review of the hundreds of bird species that have become extinct over the last 1 000 years of habitat degradation over hunting and rat introduction *Extinct Birds* has become the standard text on this subject covering both familiar icons of extinction as well as more obscure birds some known from just one specimen or from travellers tales This second edition is expanded to include dozens of new species as more are constantly added to the list either through extinction or through new subfossil discoveries The book is the result of decades of research into literature and museum drawers as well as caves and subfossil deposits which often reveal birds long gone that disappeared without ever being recorded by scientists while they lived From Great Auks Carolina Parakeets and Dodos to the amazing yet almost completely vanished bird radiations of Hawaii and New Zealand via rafts of extinction in the Pacific and elsewhere this book is both a sumptuous reference and astounding testament to humanity s devastating impact on wildlife **Nature's Ghosts** Mark V. Barrow, 2011-04-15 The rapid growth of the American environmental movement in recent decades obscures the fact that long before the first Earth Day and the passage of the Endangered Species Act naturalists and concerned citizens recognized and worried about the problem of human caused extinction As Mark V Barrow reveals in *Nature s Ghosts* the threat of species loss has haunted Americans since the early days of the republic From Thomas Jefferson s day when the fossil remains of such fantastic lost animals as the mastodon and the woolly mammoth were first reconstructed through the pioneering conservation efforts of early naturalists like John James Audubon and John Muir Barrow shows how Americans came to understand that it was not only possible for entire species to die out but that humans themselves could be responsible for their extinction With the destruction of the passenger pigeon and the precipitous decline of the bison professional scientists and wildlife enthusiasts alike began to understand that even very common species were not safe from the juggernaut of modern industrial society That realization spawned public education and legislative campaigns that laid the foundation for the modern environmental movement and the preservation of such iconic creatures as the bald eagle the California condor and the whooping crane A sweeping beautifully illustrated historical narrative that unites the fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect them *Nature s Ghosts* offers an unprecedented view of what we ve lost and a stark reminder of the hard work of preservation still ahead **The Condor's Shadow** David S. Wilcove, 2000-05-09 With gripping narrative power *The Condor s Shadow* traces the ways in which human greed and ignorance have wreaked havoc on our ecological landscape The heir apparent to Peter Matthiessen s 1959 classic *Wildlife in America* *The Condor s Shadow* is a brilliant and compulsively readable study of the state of North American

wildlife and what is being done to reverse the damage humans have caused With equal respect for the smallest feather mite and the fiercest grizzly the frailest flower and the stateliest redwood David S Wilcove illustrates in jargon free often witty prose nature s delicate system of checks and balances examining the factors that determine a species vulnerability and the consequences of losing even the tiniest part of any ecosystem An examination of both the heart wrenching failures and stunning successes of our conservation efforts The Condor s Shadow chronicles the destruction and resilience of our American wilderness and offers an insightful eloquent overview that will appeal to avid conservationists and recreational nature lovers alike     Guide to Sources for Agricultural and Biological Research J. *Hope Is the Thing With Feathers* Christopher Cokinos,2009-05-14 A prizewinning poet and nature writer weaves together natural history biology sociology and personal narrative to tell the story of the lives habitats and deaths of six extinct bird species     Vanished Sadiya Qureshi,2025-06-05 A vital and important book David Olusoga From an award winning historian of race science and empire a path breaking and poignant history of extinction as a scientific idea an imperial legacy and a political choice Anyone alive today is among a tiny fraction of the once living over 90% of species that ever existed are now extinct How did we come to think of ourselves as survivors in a world where species can vanish forever or as capable of pushing our planet to the verge of a sixth mass extinction Extinction Sadiya Qureshi shows us is a surprisingly modern concept and a phenomenon that s not as natural as we might think In Europe until the late eighteenth century species were considered perfect and unchanging creations of God Then in the age of revolutions scientists gathered enough fossil evidence to determine that mammoth bones for example were not just large elephants but a lost species that once roamed the Earth alongside ancient humans Extinction went from being regarded as theologically dangerous to pervasive and even inevitable Yet Vanished shows us that extinction is more than a scientific idea it s a political choice that has led to devastating consequences Europeans and Americans quickly used the notion that extinction was a natural process to justify persecution and genocide predicting that nations from Newfoundland s Beothuk to Aboriginal Australians were doomed to die out from imperial expansion Exploring the tangled and unnatural histories of extinction and empire Vanished weaves together pioneering original research and breath taking storytelling to show us extinction is both an evolutionary process and a human act one which illuminates our past and may alter our future     **Ornithology in Laboratory and Field** Olin Sewall Pettingill Jr.,2012-12-02 This new edition of Ornithology in Laboratory and Field continues to offer up to date coverage of the important aspects of modern ornithology Beginning with an overview of ornithology today Pettingill explores such topics as external and internal anatomy physiology ecology flight behavior migration life histories and populations     **Facing Extinction** Paul Donald,Nigel Collar,Stuart Marsden,Deborah J. Pain,2013-12-19 Examines extinction in birds with case studies of critically endangered species and the research initiatives designed to save them     **Biological Consequences of**

**the European Expansion, 1450-1800** Stephen V. Beck, 2022-02-16 Wherever the European has trod death seems to pursue the aboriginal So wrote Charles Darwin in 1836 Though there has been considerable discussion concerning their precise demographic impact reflected in the articles here there is no doubt that the arrival of new diseases with the Europeans such as typhus and smallpox had a catastrophic effect on the indigenous population of the Americas and later of the Pacific In the Americas malaria and yellow fever also came with the slaves from Africa themselves imported to work the depopulated land These diseases placed Europeans at risk too and with some resistance to both disease pools Africans could have a better chance of survival Also covered here is the controversy over the origins of syphilis while the final essays look at agricultural consequences of the European expansion in terms of nutrition both in North America and in Europe Proceedings of The Academy of Natural Sciences (Vol. 115, 1963) , **Around the World in 80 Species** Jill Atkins, Barry Atkins, 2018-11-08 The world is currently experiencing a sixth period of mass species extinction and extinction of flora and fauna is caused by a variety of factors arising from industrial activity and increasing human population such as global warming climate change habitat loss pollution and use of pesticides Most causes of extinction are linked to corporate activity either directly or indirectly Around the World in 80 Species Exploring the Business of Extinction responds to the ongoing mass extinction crisis engulfing our planet by exploring the ways in which accounting business and finance can be used to prevent species extinctions From Africa to the Far East and from Europe to the Americas the authors explore species loss and how businesses can stop mass extinctions through greater transparency and through closer engagement with their investors and wildlife organisations The book concludes that global capitalism has led us to this extinction crisis and that therefore the mechanisms of capitalism namely accounting finance investment can help to pull us out Businesses must urgently address extinction before it is too late for all species including ourselves As the first book to explore corporate accounting and accountability in relation to species on the brink of extinction this book will be of great interest to both professionals and a wider audience interested in the causes and prevention of extinction *The Road to Extinction* Richard Fitter, Maisie Fitter, 1987 *Biotic Homogenization* Julie L. Lockwood, Michael L. McKinney, 2011-06-28 Biological homogenization is the dominant process shaping the future global biosphere As global transportation becomes faster and more frequent it is inevitable that biotic intermixing will increase Unique local biotas will become extinct only to be replaced by already widespread biotas that can tolerate human activities This process is affecting all aspects of our world language economies and ecosystems alike The ultimate outcome is the loss of uniqueness and the growth of uniformity In this way fast food restaurants exist in Moscow and Java Sparrows breed on Hawaii Biological homogenization qualifies as a global environmental catastrophe The Earth has never witnessed such a broad and complete reorganization of species distributions *Nature's Diplomats* Raf De Bont, 2021-05-11 Nature's Diplomats explores the development of science based and internationally conceived nature protection in its foundational years before the 1960s the decade when it launched from obscurity onto the global stage Raf

De Bont studies a movement while it was still in the making and its groups were still rather small revealing the geographies of the early international preservationist groups their social composition self perception ethos and predilections their ideals and strategies and the natures they sought to preserve By examining international efforts to protect migratory birds the threatened European bison and the mountain gorilla in the interior of the Belgian Congo Nature s Diplomats sheds new light on the launch of major international organizations for nature protection in the aftermath of World War II Additionally it covers how the rise of ecological science the advent of the Cold War and looming decolonization forced a rethinking of approach and rhetoric and how old ideas and practices lingered on It provides much needed historical context for present day convictions about and approaches to the preservation of species and the conservation of natural resources the involvement of local communities in conservation projects the fate of extinct species and vanished habitats and the management of global nature      *Literature Review and Synthesis of Information on Pacific Island Ecosystems*
