Eye Movements And Visual Perception:

Eye-movements and Visual Perception R. W. Ditchburn, 1973 *Eye Movements and Visual Cognition* Keith Rayner, 2012-12-06 Edited by a leading scholar in the field *Eye Movements and Visual Cognition* presents an up to date overview of the topics relevant to understanding the relationship between eye movements and visual cognition particularly in relation to scene perception and reading Cognitive psychologists neuropsychologists educational psychologists and reading specialists will find this volume to be an authoritative source of state of the art research in this rapidly expanding area of study Eye Movements Dennis F. Fisher, Richard A. Monty, John W. Senders, 2017-03-27 Originally published in 1981 this volume represents the edited proceedings of the third symposium on eye movements and behaviour sponsored by the US Army Human Engineering Laboratory The conference titled The Last Whole Earth Eye Movement Conference was held in Florida in February 1980 As the conference approached seizure of the American hostages by the Iranian militants the Russian invasion of Afghanistan and the uncertain economic outlook around the world made it appear as though the title was a self fulfilling prophecy But the meeting proved highly successful and people throughout the world seemed to be adapting to the stresses of international tension making the possibility of subsequent meetings more likely The present volume is intended to serve as a complementary text to the earlier texts *Eye Movements and Psychological Processes* Monty Senders 1976 and *Eye Movements and the Higher Psychological Functions* Senders Fisher Monty 1978 rather than a revision and update of them Eye Movements and Visual Perception Geoffrey David Cumming, 1976 *The Role of Eye Movements in Visual Perception and Recognition* J. A. M. Howe, 1965 Eye Movements and the Higher Psychological Functions John W. Senders, Dennis F. Fisher, Richard A. Monty, 2017-03-27 Originally published in 1978 this volume reflects the proceedings of a conference held in February 1977 in California and is a natural successor to the earlier volume *Eye Movements and Psychological Processes* Monty information about the position of the eye in the head and the perception of visual space saccades and visual functioning and masking In further parts it goes on to look at methodology and models cognitive processes reading processes looking at static and dynamic display and finally chapters on problems and applications *Influence of Eye Movements on Visual Perception* Johan Eberhard de Graaf, 1957 Eye Movements and Visual Perception David Noton, 1971 **The Moving Tablet of the Eye** Nicholas Wade, Benjamin W. Tatler, 2005 Eye movements are a vital part of our interaction with the world They play a pivotal role in perception cognition and education Research in this field is now proceeding at a considerable pace and casting new light on how the eyes move and what information we can derive during the frequent and brief periods of fixation However the origins of this work are less well known even though much of our knowledge was derived from this research with far more primitive equipment This book is unique in tracing the history of eye movement research It shows how great strides were made in this area before modern recording devices were available especially in the measurement of nystagmus When photographic techniques were adapted to measure

discontinuous eye movements from about 1900 many of the issues that are now basic to modern research were then investigated. One of the earliest cognitive tasks examined was reading and it remains in the vanguard of contemporary research. Modern researchers in this field will be astonished at the subtleties of these early experimental studies and the ingenuity of interpretations that were advanced one and even two centuries ago. Though physicians often carried out the original eye movement research later on it was pursued by psychologists it is within contemporary neuroscience that we find these two strands reunited. Anyone interested in the origins of psychology and neuroscience will find much to stimulate and surprise them in this valuable new work.

Eye Movements, Vision, and Behavior Kenneth R. Gaarder, 1975 Eye Movements and Psychological Processes Richard A. Monty, John W. Senders, 2017-03-27 In the 10 years prior to publication the quantity of research on eye movements as they pertain to psychological processes had been increasing at a rapid rate. Originally published in 1976 the editors' purpose was to bring together investigators representing different theoretical positions and methodological approaches to present their recent findings to debate the theoretical points of view and to identify and discuss the major research problems on eye movements at the time. An attempt was made to invite participants ranging all the way from promising graduate students through the established authorities in the field. The result was an intensive three day session with meetings from early morning until late into the evening with much opportunity for formal and informal group discussion. The edited papers and transcripts of the discussions are the contents of this book.

Eye Movements in Reading Keith Rayner, 2012-12-02 *Eye Movements in Reading: Perceptual and Language Processes* focuses on eye movement and cognitive processes as a way to study the reading process. This book also discusses the different aspects of reading. Organized into seven parts encompassing 26 chapters this book begins with a discussion on the perceptual and psychophysical factors essential to eye movement during reading. This book then explains how some psychophysical factors such as type size and masking affect the reading performance. Other chapters consider the role of transient and sustained cells as well as their possible effects on reading. This text also examines the size of the perceptual span in reading and the integration of information across eye movement. Finally this book explains the eye movement abnormalities, general eye movement parameters and the cognitive processes within the reading disabled group. This book is a valuable resource to optometrists, scientists, field researchers and readers who are interested in the reading process.

The Roles of Fixational Eye Movements in Visual Perception Moshe Fried, 2008 *Influence of Eye Movements on Visual Perception* Johan Eberhard de Graaf, Rijksuniversiteit te Utrecht, 1957 Eye Movements and Their Role in Visual and Cognitive Processes Eileen Kowler, 1990 This is the first book to deal exclusively with oculomotor performance in a series that up to this point has been devoted largely to reviews of research on oculomotor anatomy and physiology. The publication of this volume signifies the recognition of the fact that a genuine understanding of eye movement will not come about through the study of neurons alone. We need to know about the capacity to make different kinds of eye movement and about

how such oculomotor capacity is used to accomplish different sorts of visual and cognitive tasks i.e. how the eye can move and why it moves in particular ways Research on respective topics was critically evaluated by the contributing authors resulting in a controversial and up to date appraisal of this subject

The Role of Eye Movements in Perceptual Processes E. Chekaluk, K.R. Llewellyn, 1992-07-06 It has become a truism that the frozen optical diagram representation of vision is the worst possible picture of the way in which we visually interact with the environment Even apart from our reaction to moving targets by pursuit movements our visual behaviour can be said to be characterised by eye movements We sample from our environment in a series of relatively brief fixations which move from one point to another in a series of extremely rapid jerks known as saccades Many questions arising from this characteristic of vision are explored within this volume including the question of how our visual world maintains its perceptual stability despite the drastic changes in input associated with these eye movements

The Interface of Language, Vision, and Action John Henderson, Fernanda Ferreira, 2013-05-24 This book brings together chapters from investigators on the leading edge on this new research area to explore on the leading edge on this new research area to explore common theoretical issues empirical findings technical problems and outstanding questions This book will serve as a blueprint for work on the interface of vision language and action over the next five to ten years

Contributions of Miniature Eye Movements to Visual Perception Martina Poletti, 2010 Abstract During periods of fixation slow drifts and microscopic saccades continually perturb the projection of the visual scene onto the retina This dissertation describes three studies that investigated the contributions of these small eye movements to visual perception According to a long standing hypothesis the primary role of microsaccades is to prevent the visual world from fading during fixation However it is still debated whether visual fading elicits microsaccades The psychophysical experiments described in this thesis found no causal relationship between microsaccades and visual fading In contrast the new experimental findings support the view that microsaccades are coordinated by the visual system to keep the preferred retinal location on the attended stimulus during fixation Analysis of visual discrimination in the presence and in the absence of the retinal image motion caused by fixational eye movements has shown that the luminance modulations resulting from fixational instability improve discrimination of visual detail New modeling results obtained by simulating the responses of retinal ganglion cells in these experiments reveal that fixational eye movements have a profound influence on synchronous activity These and other recent results suggest that the synchronization of retinal activity induced by fixational eye movements is a key component of the neural mechanisms that promote perception of spatial detail The incessant retinal motion introduced by ocular drift constitutes a problem for visual stability how does the brain know if the motion of an object on the retina is caused by fixational instability or external motion Long debated is whether an extraretinal signal helps identify and discard the retinal motion due to eye movements and thus improves perception of object motion A third new study shows that in darkness or normal illumination the visual system achieves perception of a stable world during fixation

by relying on the spatiotemporal pattern of stimuli on the retina The research described in this dissertation challenges some of the mainstream approaches in the field by showing that a visual fading does not elevate the rate of microsaccades b luminance modulations due to ocular drift enhance visual detail and e retinal motion introduced by fixational drifts is cancelled visually

Active Vision John M Findlay,Iain D Gilchrist,2003-08-07 This title focuses on vision as an active process rather than a passive activity and provides an integrated account of seeing and looking The authors give a thorough description of basic details of the visual and oculomotor systems necessary to understand active vision

Eye Movements and Psychological Functions Rudolf Groner,Christine Menz,Dennis F. Fisher,Richard A. Monty,2021-09-30 Originally published in 1983 this volume represents the edited proceedings of the first conference organized by the European Group for Eye Movement Research with the theme Eye Movements Current Research and Methodology The conference was held at the Department of Psychology University of Bern Switzerland in 1981 The book is divided into four parts covering Methods Central and Peripheral Processing Picture Viewing and Visual Tracking and Cognitive Processes and Reading Each part is introduced by one of the session chairpersons of the conference
