that complexity reduction can address the humanity of each individual healthcare situation He argues that through narratives and through complexity based social theory the complexity of each individual situation must be transcended through mindful listening and engaged dialogue Letiche suggests that in the absence of such mindfulness the lack of time for true listening and the inability of providers and systems to allow for patients and family to engage in dialogue lies both the roots of the problem and the potential for its solution If complexity theory has a role in the analysis understanding and betterment of social systems then approaches such as the one Letiche undertakes herein will become essential tools of the trade
