Learning Science in the Schools Shawn M. Glynn, Reinders Duit, 2012-10-12 Science and the technology derived from it is having a dramatic impact on the quality of our personal lives and the environment around us. Science will have an even greater impact on the lives of our students. The lives of scientifically literate students will be enriched by their understanding, appreciation, and enjoyment of the natural world. To prosper in the near future, all students must become scientifically literate and embrace the notion of life-long learning in science. Without scientific literacy, it will become impossible for students to make informed decisions about the interrelated educational, scientific, and social issues that will confront them in the future. Intended for science teachers, teacher educators, researchers, and administrators, this volume is concerned with the innovative research that is reforming how science is learned in schools. The chapters provide overviews of current research and illustrate how the findings of this research are being applied in schools. This research-based knowledge is essential for effective science instruction. The contributors are leading authorities in science education, and their chapters draw clear connections among research, theory, and classroom practice. They provide excellent examples from science classes in which their research has reformed practice. This book will help educators develop the scientific literacy of students. It bridges the gap between cutting-edge research and classroom practice to provide educators with the knowledge they need to foster students' scientific literacy.

Semiotics, also known as structuralism, is one of the major theoretical movements of the 20th century, and its influence as a way to conduct analyses of cultural products and human practices has been immense. This is a comprehensive volume that brings together many otherwise fragmented academic disciplines and currents, uniting them in the framework of semiotics. Children's Informal Ideas in Science P. J. Black, A. M. Lucas, 2002-03-11 The ideas that children have about science concepts have for the past decade been the subject of a wealth of international research But while the area has been strong in terms of data it has suffered from a lack of theory Children's Informal Ideas in Science addresses the question of whether children's ideas about science can be explained in a single theoretical framework Twelve different approaches combine to tackle this central issue each taking a deliberately critical standpoint The contributors address such themes as values in research the social construction of knowledge and the work of Piaget in a rich contribution to the debate without claiming finally to resolve it The authors conclude with a discussion of how a theory can be built up along with suggestions for ways ahead in the research

Reflective Teacher Development in Primary Science Peter Ovens, 2005-08-10 Dominant theories about primary science contend that knowledge is the key Ovens challenges this view showing through case studies that inquiry and reflection play a significant part in the learning process This applies to pupils teachers and teacher educators Taking curiosity as a pre condition for good learning Ovens shows that it is possible to increase the desire to learn more and learn better to improve confidence in the ability to inquire to imbue pupils with the courage to seek improvement to place trust in collaborative processes to raise awareness of significant detail and to encourage open mindedness
