

## The Two Classes of Eugenics and Their Effects to the Society

✓ Exclusively available on IvyPanda

Scientifically, the genetic constitution of a person authenticates his/her personal trait or character. Similarly, the characteristics of a domestic animal are crucial in the agricultural sector. Genetic experts work tirelessly to produce animals with high milk content, wool, or quality meat among others.

Consequently, the society coined the term eugenic, which means selective reproduction of desired traits in a person. Categorically, positive eugenic is the promotion or retention of hereditary characteristics, which everybody yearns for, while negative eugenics call for the abolishment of people with unwanted traits.

The practice of eugenics produces a quality, intelligent, and healthy population even in the agricultural sector. Most professionals like sociologist, physicians, economists, and demographic experts advocate for eugenics. However, what is the moral and ethical implication of the practice? The following discussion expounds the two classes of eugenics highlighting their effects to the society.

According to the advocates of the positive eugenics, eugenic retains good heritable traits in the human species by encouraging reproduction among groups (Curell and Cogdell 203).

Encouraging positive eugenic was to make sure that, only physically, mentally, and psychologically fit people intermarried. Consequently, there was an assumption that the offspring would have the parental traits (hereditary). An example of positive eugenics is whereby only men and women with distinct, attractive features like hair and eyes have the right to reproduce.

Unfortunately, the people with the so-called desirable traits may have recessive genes, which become dominant later in their lineage. According to Watson, mapping a human genome is not an easy task as the society thinks (202). Mutations and environment are some of the aspects, which may alter a desired gene. Therefore, a critical assessment of personal genes and family history or hereditary traits is the main process of promoting a healthy population.
