Containing a Series of Discoveries by the Assistance of Microscopes** John Hill, 1752      **Nature Exposed** Jennifer Tucker, 2013-08-15 In *Nature Exposed* Jennifer Tucker studies the intersecting trajectories of photography and modern science in late Victorian Britain She examines the role of photograph as witness in scientific investigation and explores the interplay between photography and scientific authority Almost immediately after the invention of photography in 1839 photographs were characterized as offering objective access to reality unmediated by human agency political ties or philosophy This mechanical objectivity supposedly eliminated judgment and interpretation in reporting and picturing scientific results But photography is a labor intensive process that allows for and sometimes requires manipulation In the late nineteenth century the nature of this new technology sparked a complex debate about scientific practices and the value of the photographic images in the production and dissemination of scientific knowledge Recovering the controversies and commentary surrounding the early creation of scientific photography and drawing on a wide range of new sources and critical theories Tucker establishes a greater understanding of the rich visual culture of Victorian science and alternative forms of knowledge including psychical research      **Essays on the Puerperal Fever and Other Diseases Peculiar to Women** Fleetwood Churchill, 1850 Playing with their father's hat Olive and Otis Opossum accidentally drop it on Mr Foxley who becomes convinced that the hat is magical      Scientific Credibility and Technical Standards in 19th and early 20th century Germany and Britain Jed Z.

Buchwald,1996-11-30 The articles in this first volume of ARCHIMEDES explicitly and intentionally cross boundaries between science and technology and they also illuminate one another The first three contributions concern optics and industry in 19th century Germany the fourth concerns electric standards in Germany during the same period the last essay in the volume examines a curious development in the early history of wireless signalling that took place in England and that has much to say about the establishment and enforcement of standard methods in a rapidly developing technology that emerged out of a scientific effect Historical work over the last few decades has shown that technology cannot be characterized simply or even usually as applied science The beliefs the devices and the natural objects that are created or discovered by scientists often play altogether minor roles in the construction of technologies Taking this realization as a given the essays in Scientific Credibility and Technical Standards effectively argue that we must now seek to go beyond it we must also begin to think carefully about the role that science actually did play when it was explicitly deployed by technologists **The Annals and**
