Mammalian Protein Metabolism H. N. Munro,2013-09-24 Mammalian Protein Metabolism Volume III provides an overview of the state of knowledge on mammalian protein metabolism It enlarges and adds depth to the picture of protein metabolism provided by Volumes I and II The present volume covers two aspects of protein metabolism not specifically considered in the earlier parts of the treatise First there is a section of three chapters dealing with changes in protein metabolism during evolution and during growth and development At its most fundamental level this part deals in reality with an aspect of regulation of protein metabolism since differences in metabolism between species and changes occurring during growth are both outward expressions of genetic control mechanisms that determine the form and characteristics of an animal The other section in this volume is a survey of methods appropriate to the study of protein metabolism in mammals This part of the work should prove of special interest to investigators who require a critical evaluation of the possibilities and limitations of methods applicable to intact animals

Immunochemistry of Proteins M. Zouhair Atassi,2012-12-06 The structural features responsible for the immunogenicity of certain parts of native protein molecules have been of interest to immunochemists and protein chemists for over three decades Following the early work of Land steiner in 1942 which showed that peptide fragments from silk fibroin exhibited an inhibitory activity toward the reaction of the protein with its antibodies fragments from many other protein systems have been isolated and studied However no concerted effort was or could be devoted to the elucidation of the complete antigenic structure of a protein In order for these endeavors to be successful and meaningful knowledge of both the amino acid sequence and the detailed three dimensional structure of the protein is necessary Such information was not available for a protein until early in the 1960s This and the fact that protein chemistry was not in fact sufficiently developed early in the 1960s to enable the successful completion of the entire antigenic structure of a protein were major contributing factors for the slow progress in this field Determination of the antigenic structures of proteins therefore posed a chemical challenge of enormous proportions For these reasons many investigators diverted their attention to study of the immunochemistry of homo or mixed amino acid polymers in the hope that the information derived from these systems might prove useful in the understanding of the immunochemistry of proteins
