Essays In Index Number Theory:

Essays on the Theory and Practice of Index Numbers Kam Yu, 2010-03 Economic measurement has over the years become an important subject in academic and policy researches. Debates in the development of macroeconomic theory and public policy rely on accurate feedback of aggregate data. This book fills the gap between the theory and practice in index numbers. It reviews and explores several important topics which lead to improvement in measuring price and output indices. These include econometric problems in hedonic regression, treatment of seasonal goods in the CPI, output and productivity measurement of government services, efficiency analysis of the health care sector and a novel approach in calculating the cost of living indices for products involving risk and uncertainty. The book serves as a valuable reference for academic economists, policy analysts and economic statisticians.

Economic Analysis of Production Price Indexes Franklin M. Fisher, Karl Shell, 1998 This work on index number construction focuses on production indexes including output and input deflators that can be used for constructing real output and real input. The authors treat separately the different production units: the firm, the industry and the economy as well as the different forms of industrial organization: monopoly, monopsony and competition. Only in the simplest cases is the appropriate theory isomorphic to that of the cost of living index because of the interlinkages among the various production units. A firm cannot always assume that the behaviour of its competitors, suppliers and customers will be unaffected by price changes and only in special cases can an industry take supply and demand conditions as given.

This book is distinctive in that it 1 places emphasis on the relationship between price indices and economic theory, 2 presents cutting edge methods and topics such as multilateral indices using scanner data and price measurement using Engel curves and 3 provides explanations of essential mathematical techniques like functional equations thus enabling self study from the fundamentals to the forefront of modern index number theory.
