Tips for Correct Calculations:

Make sure that all measurements are in the same units. If necessary, convert between units.

- In most cases, it is best to convert a larger unit to smaller units (e.g. convert grams to milligrams). This conversion uses multiplication and most often keeps the calculation in whole numbers.

- Always check for reasonableness of your answer. Does the drug dosage make sense? (Amounts less than half a tablet or greater than 3 tablets are not common, but still possible.)

Formula: $D/H * Q = X$ Desired/Have * Quantity = X

Term	Symbol	Meaning	Example
Dosage ordered or desired dose	D	The amount of medication that the physician prescribed	"Give 500 milligrams" " Give grains/v" " Give 1.2 milliliters"
Dosage strength or supply on hand	H	The amount of drug in a specific unit of measure (what is available; in stock)	250 milligrams Grains/v
Unit of measure or quantity of unit	Q	The unit of measure for the specific dosage strength or supply on hand	per 2 milliliters per capsule per tablet
Unknown Dosage	S	The dosage you are trying to calculate	Not applicable
