important given current debates within the scientific community Of the five components of cancer control prevention early detection including screening treatment rehabilitation and palliative care prevention is regarded as the most important Yet the knowledge available to prevent many cancers is incomplete and even if we know the main causal factors for a cancer we often lack the understanding to put this knowledge into effect Further with the long natural history of most cancers it could take many years to make an appreciable impact upon the incidence of the cancer Because of these facts many have come to believe that screening has the most potential for reduction of theburden of cancer Yet through trying to apply the knowledge gained on screening for cancer the scientific community has recognized that screening can have major disadvantages and achieve little at substantial cost This reduces the resources that are potentially available both for prevention and for treatment Food, Nutrition, Physical Activity, and the Prevention of Cancer World Cancer Research Fund (London),2007
