Eso Workshop On Site Testing For Future Large Telescopes:

ESO Workshop on Site Testing for Future Large Telescopes, La Silla, 4-6 October 1983 Arne Ardeberg, Lodewijk Woltjer, 1984 **The Design and Construction of Large Optical Telescopes** Pierre Bely, 2006-05-26 There is no dearth of books on telescope optics and indeed optics is clearly a key element in the design and construction of telescopes. But it is by no means the only important element. As telescopes become larger and more costly other aspects such as structures, pointing, wavefront control, enclosures and project management become just as critical. Although most of the technical knowledge required for all these fields is available in various specialized books, journal articles and technical reports, they are not necessarily written with application to telescopes in mind. This book is a first attempt at assembling in a single text the basic astronomical and engineering principles used in the design and construction of large telescopes. Its aim is to broadly cover all major aspects of the field from the fundamentals of astronomical observation to optics, control systems, structural mechanical and thermal engineering, as well as specialized topics such as site selection and program management. This subject is so vast that an in-depth treatment is obviously impractical. Our intent is therefore only to provide a comprehensive introduction to the essential aspects of telescope design and construction. This book will not replace specialized scientific and technical texts. But we hope that it will be useful for astronomers, managers and systems engineers who seek a basic understanding of the underlying principles of telescope making and for specialists who wish to acquaint themselves with the fundamental requirements and approaches of their colleagues in other disciplines. **Second**

It is the most important English language abstracting journal in the mentioned branches. The abstracts are classified under more than hundred subject categories thus permitting a quick survey of the whole extended material. The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences. As such it represents a necessary ingredient of any astronomical library all over the world. Space Science Reviews 1. Dividing the

whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes The Observatory Magazine 1 International Conference on Advanced Technology Optical Telescopes ,1986

Reports on Astronomy Richard M. West,2012-12-06 volume XIX A of IAU Transactions contains the reports by Presidents of Commissions covering the period July 1981 June 1984 The topics of IAU Commissions deal with all of contemporary astronomy and the present volume therefore constitutes an exhaustive and unique record of astronomical research during this interval It is particularly useful for astronomers and other scientists who want to gain an overview of a certain field not necessarily near their own research area Each Commission President was requested by early 1984 to begin preparations for the compilation of his/her Commission report All members of Commissions were asked to supply details about their individual research programmes The ensuing very substantial task of concatenating was undertaken in late 1984 by the Presidents often supported by a team of authors all recognized authorities in their fields In order to preserve some measure of uniformity which is in any case very difficult with so many authors editorial guidelines were sent to Presidents including the number of pages allotted to each Commission
